[1]

INTRODUCTION

The term 'Viking' is derived from the Old Norse *vík*, a bay, and means 'one who haunts a bay, creek or fjord[1].' In the 9th and 10th centuries it came to be used more especially of those warriors who left their homes in Scandinavia and made raids on the chief European countries. This is the narrow, and technically the only correct use of the term 'Viking,' but in such expressions as 'Viking civilisation,' 'the Viking age,' 'the Viking movement,' 'Viking influence,' the word has come to have a wider significance and is used as a concise and convenient term for describing the whole of the civilisation, activity and influence of the Scandinavian peoples, at a particular period in their history, and to apply the term 'Viking' in its narrower sense to these movements would be as misleading as to write an account of the age of Elizabeth and label it 'The Buccaneers.'

[2]

It is in the broader sense that the term is employed in the present manual. Plundering and harrying form but one aspect of Viking activity and it is mainly a matter of accident that this aspect is the one that looms largest in our minds. Our knowledge of the Viking movement was, until the last half-century, drawn almost entirely from the works of medieval Latin chroniclers, writing in monasteries and other kindred schools of learning which had only too often felt the devastating hand of Viking raiders. They naturally regarded them as little better than pirates and they never tired of expatiating upon their cruelty and their violence. It is only during the last fifty years or so that we have been able to revise our ideas of Viking civilisation and to form a juster conception of the part which it played in the history of Europe.

The change has come about chiefly in two ways. In the first place the literature of Scandinavia is no longer a sealed book to us. For our period there are three chief groups of native authorities: (1) the prose sagas and the *Historia Danica* of Saxo Grammaticus, (2) the eddaic poems, (3) the skaldic poems. The prose sagas and Saxo belong to a date considerably later than the Viking age, but they include much valuable material referring to that period. The chief poems of the older Edda date from the Viking period itself and are invaluable for the information they[3] give us as to the religion and mythology of the Scandinavian peoples at this time, the heroic stories current amongst them, and their general outlook on life. The skaldic poems are however in some ways the most valuable historical authority for the period. The *skalds* or court-poets were attached to the courts of kings and jarls, shared their adventures, praised their victories, and made songs of lament on their death, and their work is largely contemporary with the events they describe.

Secondly, and yet more important in its results perhaps, archaeological science has, within the last half-century, made rapid advance, and the work of archaeologists on the rich finds brought to light during the last hundred years has given us a vast body of concrete fact, with the aid of which we have been able to reconstruct the material civilisation of the Viking period far more satisfactorily than we could from the scattered and fragmentary notices found in the

sagas and elsewhere. The resultant picture calls for description later, but it is well to remember from the outset that it is a very different one from that commonly associated with the term 'Viking.'

With this word of explanation and note of warning we may proceed to our main subject.

FOOTNOTE:

[1] The word is older than the actual Viking age: it is found in Anglo-Saxon in the form *wicing*. Some writers have said that it means 'people from the district of the *Vik*' in South Norway, so-called from the long fjord-like opening which is found there, but the early Anglo-Saxon use of the term forbids this derivation.

[4]

CHAPTER I CAUSES OF THE VIKING MOVEMENT

The period of Scandinavian history to which the term Viking is applied extends roughly from the middle of the 8th to the end of the 10th or the first half of the 11th century. Its commencement was marked by the raids of Scandinavian freebooters upon the coasts of England, Western Scotland and Ireland and upon Frankish territory. Its climax was reached when in the course of the 9th and 10th centuries Scandinavian rule was established in Ireland, Man and the Western Islands, the northern and midland districts of England, Normandy, and a great part of Russia. Its close was marked by the consolidation of the Scandinavian kingdoms in the late 10th and early 11th centuries under such mighty sovereigns as Olaf Tryggvason and Olaf the Holy in Norway, Olaf Skötkonung in Sweden, and greatest of all, king Knut in Denmark, who for a brief time united the whole of Scandinavia and a great part of the British Isles in one vast confederacy.

The extent and importance of the movement is indicated from the first by the almost simultaneous appearance of trouble in England, on the coast of France, and on the Eider boundary between Denmark and the Frankish empire.

[5]

In the reign of Beorhtric, king of Wessex (786-802), three ships of the Northmen coming from Hörðaland (around Hardanger Fjord) landed near Dorchester, in June 793 Lindisfarne was sacked, in March 800 Charlemagne found himself compelled to equip a fleet and establish a stronger coastguard to defend the Frankish coast against the attacks of the Northmen, and from 777 onwards, when the Saxon patriot Widukind took refuge with the Danish king Sigefridus (O.N. Sigröðr), there was almost constant friction along the land-boundary between Denmark and the Frankish empire.

This outburst of hostile activity had been preceded by considerable intercourse of a varied character between Scandinavia and the countries of Western Europe. Early in the 6th century the Danes or, according to another authority, the Götter from Götaland in south Sweden, invaded Frisia under their king Chocilaicus. Reference is made to this raid in the story of Hygelac, king of the Geatas, in *Beowulf*. Professor Zimmer suggested that the attacks of unknown pirates on the island of Eigg in the Hebrides and on Tory Island off Donegal, described in certain Irish annals of the 7th century, were really the work of Scandinavian raiders. The evidence of Irish legend and saga goes to prove that in the same century Irish anchorites settled in the Shetlands but were later compelled by the arrival of Scandinavian settlers[6] to move on to the lonely Faroes. Here they were not to be left in peace, for the Irish geographer Dicuil, writing in 825, tells us that the Faroes had then been deserted by the monks for some thirty years owing to the raids of Northmen pirates. Dr Jakobsen has shown that the forms of place-names in the Shetlands point very definitely to a settlement from Scandinavia in pre-Viking days—before 700—while the sculptured stones of Gothland show already at the end of the 7th century clear evidence of Celtic art influence. Possibly also merchants of Scandinavian origin were already settled in the Frankish empire and it is certain that there was considerable trade between Scandinavia and the West.

Most of the intercourse thus demonstrated was slow in development, peaceful and civilising in character. How came it that in the later years of the 8th century this intercourse was suddenly strengthened and intensified, while at the same time it underwent a great change both in methods and character?

The traditional explanation is that given by Dudo and by William of Jumièges in their histories of the settlement of Normandy and by Saxo in his account of Danish settlements in Baltic lands in the 10th century, viz. that the population of Scandinavia had outgrown its means of support and that enforced emigration was the result. There may be a certain element of truth in the tradition but when it says[7] that this excess of population was due to polygamy we have every reason to doubt it. Polygamy does not lead to an over-rapid growth of population as a whole, and it is fairly certain that it was practised only by the ruling classes in Scandinavia. It is quite possible, however, that the large number of sons in the ruling families made it necessary for the younger ones to go forth and gain for themselves fresh territories in new lands.

A clearer light is perhaps thrown on the matter if we examine the political condition of the Scandinavian countries at this time. In Norway we find that the concentration of kingly authority in the hands of Harold Fairhair after the middle of the 9th century led many of the more independent spirits to leave Norway and adopt a Viking life in the West or to settle in new homes in Iceland. So strong was the spirit of independence that when Harold Fairhair received the submission of the Vikings of the West after the battle of Hafrsfjord, many of them rather than endure even a shadowy overlordship abandoned their Viking life and settled down to peaceful independence in Iceland. It is quite possible that earlier attempts at consolidation on the part of previous petty Norwegian kings may have had similar results.

Of the condition of Sweden we know practically nothing but we have sufficient information about the[8] course of events in Denmark at this time to see that it probably tended to hasten the development of the Viking movement. Throughout the first half of the 9th century there were repeated dynastic struggles accompanied probably by the exile, voluntary or forced, of many members of the rival factions.

External causes also were certainly not without influence. From the 6th century down to the middle of the 8th, the Frisians were the great naval and trading power of North-West Europe. They had probably taken some part in the conquest of England and, during the 7th and 8th centuries, the whole of the coast of the Netherlands from the Scheldt to the Weser was in their hands. Their trade was extensive, their chief city being Duurstede a few miles south-east of Utrecht. The northward expansion of the Franks brought them into collision with the Frisians in the 7th century. The struggle was long and fierce but in the end the Frisians were defeated by Charles Martel in 734 and finally subjugated by Charlemagne in 785. The crushing of Frisian naval power and the crippling of their trade probably played no unimportant part in facilitating the Scandinavian advance, and it is curious to note that while there is considerable archaeological evidence for peaceful intercourse between the west coast of Norway and Frisian lands in the 8th century, that evidence seems to come to an[9] end about the year 800, just when Frisian power finally declined. There can be no doubt also that the conquest of the Saxons by Charlemagne at the close of the 8th century, bringing Franks and Danes face to face along the Eider boundary, made the latter uneasy.

There has been much arguing to and fro of the question as to the respective shares taken by Danes and Norwegians in the Viking movement. That of the Swedes can fortunately be determined with a good deal more certainty. The Swedes were for the most part interested only in Eastern Europe and there by way of trade rather than of battle: we learn from runic inscriptions and other sources that some Swedes did visit England and the West, but these visits were due to individual rather than national activity. The question as between Dane and Norwegian has been to some extent made more difficult of settlement through the national prejudices of Scandinavian scholars; e.g. Danes for the most part decide in favour of the Danish origin of Rollo of Normandy, while Norwegians decide in favour of his Norwegian birth. Such differences of opinion are unfortunately only too often possible owing to the scantiness of the material upon which we have to base our conclusions. Medieval chroniclers were for the most part unable or unwilling to distinguish between Danes and Norwegians; they were all alike[10] 'Nordmanni' to them and the term 'Dani' is practically interchangeable with it. The vagueness of their ethnographical knowledge is manifest when we find the Norman Dudo at the beginning of the 11th century tracing back the Dani (or Daci) to an original home in Dacia. The Irish annalists did, however, draw a very definite distinction between Norwegians and Danes—Finn-gaill and Dubh-gaill as they called them, i.e. White and Black Foreigners respectively[2]. They seem never to confuse them, but exactly on what grounds they gave them their distinguishing epithets it is now impossible to determine. They do not correspond to any known ethnographical differences, and the only other reasonable

suggestion which has been offered is that the terms are used to describe some difference of armour or equipment as yet unknown to us. The Irish annals also distinguish between Daunites or Danes and Lochlanns or men from Lochlann, i.e. Norway; but again the origin of the term Lochlann as applied to Norway is obscure. The writers of the Anglo-Saxon Chronicle seem to use the term *Norðmenn* very definitely of Norwegians, just as Alfred does in his translation of Orosius, but the term *Dene* came to be used more vaguely and uncertainly. It is only very rarely that the chroniclers^[11] vouchsafe us precise information as to the home of any particular group of Viking raiders. We have already mentioned the presence of Norwegians from Hörðaland in England at the very opening of the movement^[3]: once we hear of 'Westfaldingi,' i.e. men from Vestfold in South Norway, in an account of attacks on Aquitaine, and in one passage the Vikings are called 'Scaldingi,' but it is disputed whether this means Vikings who had been quartering themselves in the valley of the Scheldt, or is a term applied to the Danes from the name of their royal family, viz. the Skjöldungar^[4]. Speaking roughly we may however assert that Ireland, Scotland and the Western Islands were almost entirely in the hands of Norwegian settlers (Danish attacks on Ireland failed for the most part). Northumbria was Norwegian, but East Anglia and the Five Boroughs were Danish. The attacks on France and the Netherlands were due both to Norwegians and Danes, probably with a preponderance of the latter, while Danes and Swedes alone settled in Baltic lands.

FOOTNOTES:

[2] The name *Finn-gaill* survives in Fingall, the name of a district to the north of Dublin, while *Dubh-gaill* is the second element in the proper names MacDougall and MacDowell.

[3] The name *Hiruath* given by Celtic writers to Norway probably points also to a tradition that many of the Viking invaders of Ireland were Hörðar from Norway.

[4] A third explanation has recently been suggested by Dr Björkman, viz. that it is a Low German word meaning 'shipmen' which came to be used specially of the Vikings.

[12]

CHAPTER II THE VIKING MOVEMENT DOWN TO THE MIDDLE OF THE 9TH CENTURY

England was possibly the scene of the earliest Viking raids, but after the Dorchester raid, the sack of Lindisfarne in 793 (v. *supra*, p. 5), and the devastation of the monastery of St Paul at Jarrow in 794 we hear nothing more of Vikings in England until 835. The fate of Ireland was different. Attacks began almost at the same time as in England and continued without intermission. Vikings sailed round the west coast of Scotland. Skye and then Lambay Island

off Dublin were invaded in 795, Glamorganshire was ravaged in the same year and the Isle of Man was attacked in 798. Iona was plundered in 802 and again in 806. In 807 invaders appeared off the coast of Sligo and made their way inland as far as Roscommon, and in 811 Munster was plundered. In 821 the Howth peninsula near Dublin and two small islands in Wexford Haven were ravaged. The Vikings had completely encircled Ireland with their fleets and by the year 834 they had made their way well into the interior of the island so that none were safe from their attacks. They no longer contented themselves with isolated raids: large fleets began to visit Ireland and to anchor in the numerous loughs and[13] harbours with which the coast abounds. Thence they made lengthy raids on the surrounding country and often strengthened their base by building forts on the shores of the loughs or harbours in which they had established themselves. It was in this way that Dublin, Waterford and Limerick first rose to importance.

Of the leaders of the Vikings at this time there is only one whose figure stands out at all clearly, and that is Turges (O.N. Þorgestr) who first appeared in 832 at the sack of Armagh. He had come to Ireland with a great and royal fleet and 'assumed the sovereignty over the foreigners in Erin.' He had fleets on Lough Neagh, at Louth, and on Lough Ree, and raided the country as far south as the Meath district. Turges was not the only invader at this time: indeed so numerous were the invading hosts that the chronicles tell us 'after this there came great sea-cast floods of foreigners into Erin, so that there was not a point thereof without a fleet.' The power of Turges culminated in 841, when he drove the abbot of Armagh into exile, usurped the abbacy, and exercised the sovereignty of North Ireland. At the same time his wife Ota (O.N. Auðr) profaned the monastery of Clonmacnoise and gave audience, probably as a *vö/va* or prophetess, upon the high altar. Three years later Turges was captured by the Irish and drowned in Lough Owel (co. West Meath).

[14]

The early attacks on England and the first invasion of Ireland were alike due to Norsemen rather than Danes. This is evident from their general course, from the explicit statement of the Anglo-Saxon chronicle, and from the fact that the first arrival of Danes in Ireland is definitely recorded in the year 849. The attack on Dorchester (c. 786-802), lying as it does near the centre of the south coast of England, is somewhat strange if it is assigned to the traditional date, viz. 787, but there is no authority for this, and if it is placed at any date nearer to 802 (before which it must have taken place), it is probable that the attack may be explained as an extension of Viking raids down St George's Channel and round the S.W. corner of England.

In 835 the attacks on England were renewed after an interval of 40 years, but as they now stand in close connexion with contemporary invasions of Frankish territory there is every reason to believe that they were of Danish rather than of Norse origin. The attacks began in the south and west but they soon spread to East Anglia and Lindsey. In 842 the same army ravaged London, Étapes and Rochester. In 851 Aethelstan of Kent defeated the Danes at

sea in one of the rare battles fought with them on their own element, and in the same year they remained for the winter in Thanet, probably owing to the loss of their ships. The size and importance of these[15] attacks may be gauged from the fact that in this year a fleet of some 350 Danish ships sailed up the Thames. It was probably that same fleet, with slightly diminished numbers, which in 852 ravaged Frisia and then sailed round the British Isles, came to Ireland, and captured Dublin. In 855 the Danes wintered for the first time in Sheppey and we reach the same point in the development of their attacks on England to which they had already attained in Ireland. We pass away from the period of raiding. The Danes now came prepared to stay for several years at a time and to carry on their attacks with unceasing persistency.

The course of events in the Frankish empire ran on much the same lines as in England and Ireland during these years except that here trouble arose on the land boundary between Denmark and the Franks as well as on the sea-coast.

Alarmed by the conquest of the Saxons the Danish king Guðröðr collected a fleet at Slesvík and in 808 he crossed the Eider and attacked the Abodriti (in Mecklenburg-Schwerin), a Slavonic tribe in alliance with the Franks. He also sent a fleet of some 200 vessels to ravage the coast of Frisia, laid claim to that district and to Saxony, north of the Elbe, and threatened to attack Charlemagne in his own capital. The emperor was preparing to resist him when news arrived (810) of the death of Guðröðr[16] at the hands of one of his followers and the consequent dispersal of the Danish fleet.

Soon after disputes over the succession arose between the family of Guðröðr and that of an earlier king Harold. Ultimately the contest resolved itself into one between the sons of Guðröðr, especially one Horic (O.N. Hárekr) and a certain Harold. It lasted for several years, the sons of Guðröðr for the most part maintaining their hold on Denmark. At one time during the struggle Harold and his brother Ragnfröðr went to Vestfold in Norway, 'the extreme district of their realm, whose chiefs and peoples were refusing to be made subject to them, and gained their submission,' showing clearly that at this time Denmark and Southern Norway were under one rule and rendering probable the identification of Guðröðr with Guðröðr the Yngling who about this time was slain by a retainer in Stifla Sound on the south coast of Norway. This king ruled over Vestfold, half Vingulmörk and perhaps Agðir. Both parties were anxious to secure the support of the emperor Lewis and in the end Harold gained his help by accepting baptism at Mainz in 826. He promised to promote the cause of Christianity in Denmark, while Lewis in return granted him the district of Riustringen in Frisia as a place of retreat in case of necessity. The Danes thereby gained their first foothold within the empire.

[17]

Sufficient has been said of the relation between Denmark and the empire on its land boundary: we must now say something of the attacks made by sea.

The first were made in 799 on the coast of Aquitaine and they were probably due to raiders from Ireland who followed a well-known trade route from South Ireland to the ports of Southern France. In 800 Charlemagne inspected the coast from the Somme to the Seine and gave orders for the equipment of a fleet and the strengthening of the coastguard against Northmen pirates. When Guðröðr's fleet plundered the islands off the Frisian coast in 810, Charlemagne gave orders for his fleet to be strengthened once more, but the results were meagre in the extreme. The passage of the Channel was no longer safe, and year after year, from some time before 819, Vikings harried the island of Noirmoutier at the mouth of the Loire, commanding the port of Nantes and the extensive salt-trade of the district. The Island of Rhé opposite La Rochelle, was raided in similar fashion.

The Frankish empire was free from attack between the years 814 and 833. During the same time the English coast was also unvisited, and it is probable that the struggles for the succession in Denmark had for the time being reduced that kingdom to inactivity. About the year 830 the Danish king Hárekr seems to have established himself^[18] firmly on the throne, while on the other hand the emperor Lewis was troubled by the ambition of his sons Lewis, Pippin and Lothair. It is probably no chance coincidence that these events synchronised with the renewal of Viking attacks on Frisia. Throughout their history the Vikings showed themselves well informed of the changing political conditions of the countries which they visited and ready to make the utmost use of the opportunities which these might give for successful invasion.

Frisia was the main point of attack during the next few years. Four times was the rich trading town of Duurstede ravaged; fleets sailed up the Veldt, the Maas, and the Scheldt; Antwerp was burned and the Island of Walcheren plundered, so that by the year 840 the greater part of Frisia south of the Vlie, was in Danish hands and so it remained till the end of the century. The Danish king Hárekr repeatedly denied all complicity in these raids and even promised to punish the raiders, but it is impossible to tell how far his denials were genuine. Equally difficult is it to say how far Harold in his Frisian home was responsible for these attacks. The annalists charge him with complicity, but Lewis seems to have thought it best to bind him by fresh gifts and (probably about 839) granted the district around Duurstede itself to him and his brother Roric (O.N. Hrcærekr) on condition that they helped to^[19] ward off Viking attacks. All the efforts of the emperor to equip a fleet or to defend the coast were to no purpose, and there was even a suspicion that the Frisian populace were in sympathy with the Vikings. So great was the terror of attack that when in 839 a Byzantine mission, including some Rhôs or Swedes from Russia, visited the emperor at Ingelheim, the Swedes were for a time detained under suspicion, as spies.

On the death of Lewis the Pious in 840 things went from bad to worse. The division of the empire in 843 gave the coast from the Eider to the Weser to Lewis, from the Weser to the Scheldt to Lothair, and the rest to Charles, removing all possibility of a united and organised defence, and soon these princes entered on the fatal policy of calling in the Vikings to assist

them in their quarrels. Thus Lothair in 841 endeavoured to bind Harold to his cause by a grant of the Island of Walcheren and Harold is found in the following year with Lothair's army on the Moselle.

The Viking expeditions to England and France stand now in close connexion. In 841 the valley of the Seine was ravaged as far as Rouen, in 842 Étampes in Picardy was destroyed by a fleet from England, while in 843 Nantes fell a prey to their attacks. From their permanent quarters at Noirmoutier the Vikings sailed up the Garonne and penetrated inland as far as Toulouse. In 844 we hear from [20] Arab historians of their vessels swarming on the coasts of Spain like 'dark red sea-birds,' but while they effected landings at Lisbon and Cadiz and at Arzilla in Morocco, and captured Seville, with the exception of its citadel, the Mussulman resistance was too stout for them to effect much.

As a result of this expedition the Emir of Cordova, Abd-ar-Rahman II sent an embassy to the king of the *Madjus* (i.e. the magi or the heathen, one of the commonest Arab names for the Vikings). The ambassador found the king living in an island three days' journey from the mainland, but we are told that the heathen occupied many other neighbouring isles and the mainland also. He was courteously received by the king and became an especial favourite with the queen Noud (? O.N. Auðr). His companions were alarmed at the intimacy and as a result the ambassador paid less frequent visits to court. The queen asked him why, and when he told her the reason she said that, owing to perfect freedom of divorce, there was no jealousy among the Madjus. The details of the story are too vague to admit of certainty, but it would seem as if the embassy had visited the court of the great Turges and his equally remarkable wife Auðr in Ireland, or perhaps that of Olaf the White and his wife Auðr (*v. infra*, p. 66).

In 845 Hárekr of Denmark sailed up the Elbe and destroyed Hamburg, while in the same year the [21] dreaded Ragnarr Loðbrók, most famous of all Vikings, sailed up the Seine as far as Paris. While on its retreat from Paris, after the usual devastation, a strange and deadly disease, possibly some form of dysentery due to scantiness of food resulting from a hard winter, broke out in the Danish army. Various legends arose in connexion with this event, and it finds a curious echo in the story told by Saxo Grammaticus of an expedition made by Ragnarr among the Biarmians (in Northern Russia) when that people by their prayers called down a plague of dysentery upon the Danes in which large numbers perished. In the end the historical plague was stayed when Hárekr commanded the Vikings on their return to Denmark to refrain from flesh and meat for fourteen days. Whether as a result of the plague or from some other cause Hárekr now showed himself ready to come to terms with Lewis, and for the next eighty years there was complete peace along the Eider boundary. The whole of the coast was still open to attack however; Frisia was hardly ever free from invaders; Brittany was obliged to buy off Danish attacks in 847, while Noirmoutier continued to form a basis of attack against Southern France in the Gironde district. The Viking invasions in France had attained much the same stage as that to which we have already traced them in England and Ireland.

[22]

CHAPTER III

THE VIKINGS IN ENGLAND TO THE DEATH OF HARTHACNUT

The great development of Viking activity which took place after 855 was certainly not unconnected with the course of events in Denmark itself. Hárekr was attacked by his two nephews in 850 and compelled to share the kingdom with them. In 854 large bands of Vikings returned to their fatherland after twenty years' ravaging in Frankish territory. Trouble now arose between Hárekr and his nephew Godurm (O.N. Guðormr), one of the returned leaders. Civil war broke out and ultimately, after a great fight, the kingship fell to a younger Hárekr, a relative of the late king. A severe dynastic struggle of this kind must have been accompanied by much unsettlement and perhaps by an actual proscription. It would certainly seem that there was some definite connexion between these events and the coincident appearance of the sons of Ragnarr Loðbrók as leaders of a more extended Viking movement both in England and in France. Three of his sons—Halfdanr, Ubbi and Ívarr—took part in the first wintering in Sheppey in 855, while in the same year another son Björn Ironside appeared on the Seine.

[23]

The figure of Ragnarr Loðbrók himself belongs to an earlier generation, and great as was his after-fame we unfortunately know very little of his actual career. He would seem to have been of Norwegian birth, closely connected with the south of Norway and the house of Guðröðr, but like that prince having extensive interests in Denmark. He probably visited Ireland in 831, for we read in Saxo of an expedition made by Ragnarr to Ireland when he slew king Melbricus and ravaged Dublin, an event which is pretty certainly to be identified with an attack made on the Conaille district (co. Louth) by foreigners in 831 when the king Maelbrighde was taken prisoner. He led the disastrous Seine expedition in 845 (*v. supra*, p. 21). The next glimpse of him which we have is probably that found in certain Irish annals where he is represented as exiled from his Norwegian patrimony and living with some of his sons in the Orkneys while others were absent on expeditions to the British Isles, Spain and Africa, and a runic inscription has been found at Maeshowe in the Orkneys confirming the connexion of the sons of Loðbrók and possibly of Loðbrók himself with those islands. The expeditions would be those mentioned above and the yet more famous one made to Spain, Africa and Italy by Björn Ironside in the years 859-62 (*v. infra*, pp. 46-7). Ragnarr Loðbrók's later history is uncertain. According to the Irish annals quoted[24] above, his sons while on their expedition dreamed that their father had died in a land not his own and on their return found it to be true. This agrees with Scandinavian tradition according to which Ragnarr met his death at the hands of Aelle, king of Northumbria, by whom he was thrown into a snake-

pit, while the capture of York by Ívarr the Boneless in 866-7 (*v. infra*) is represented as part of a great expedition of vengeance undertaken by the sons of Ragnarr. This tradition (apart from certain details) is probably historical, but we have no definite confirmatory evidence.

With this note on the history of Denmark at this time and on the career of the most shadowy, if at the same time the most famous of the Viking leaders, we may turn once more to the history of events in England.

For ten years after the wintering in Sheppey, England was left in a state of comparative peace. The change came in 866 when a large Danish force which had been bribed to leave the Seine by Charles the Bald sailed to England and took up its quarters in East Anglia. In 867 they crossed the Humber and captured York, their task being made easier by the quarrels of Aelle and Osberht as to the kingship of Northumbria. Next year the rivals patched up their differences, but failed to recapture York from the Danes under Ívarr and Ubbi. Setting up a[25] puppet king Ecgberht in Northumbria north of the Tyne, the Danes next received the submission of Mercia and returned to York in 869. In 870 they marched through Mercia into East Anglia, as far as Thetford, engaged the forces of Edmund, king of East Anglia, defeated and slew him, whether in actual battle or in later martyrdom, as popular tradition would have it, is uncertain. The death of St Edmund, king and martyr, soon became an event of European fame and no Viking leader was more widely execrated than the cruel Ívarr, who was deemed responsible.

The turn of Wessex came next. The fortunes of battle fluctuated but the accounts usually terminate with the ominous words 'the Danes held possession of the battle field.' In 871, Alfred commenced his heroic struggle with the Danes and in the first year of his reign some nine pitched battles were fought, beside numerous small engagements. So keen was the West Saxon resistance that a truce was made in 871 and the Danes turned their attention to Mercia once more. London was forced to ransom itself at a heavy price and a coin of Halfdanr, probably minted in London at the time, has been found. After a hurried visit to Northumbria the *here* settled down for the winter of 872-3 at Torksey in the Lindsey district, whence they moved in 873 to Repton in Derbyshire. They overthrew Burhred of[26] Mercia and set up a foolish thegn of his as puppet ruler of that realm. In the winter of 874-5 the *here* divided forces: one part went under Halfdanr to the Tyne valley, the other under Guthrum (O.N. Guðormr) to Cambridge.

In 876 Halfdanr divided up the lands of Northumbria among his followers who soon ploughed and cultivated them. At the same time they did not forget their old occupations. Raids were made against the Picts and the Strathclyde Welsh, while Halfdanr soon became involved in the great struggle going on in Ireland at that time between Norsemen and Danes. This ultimately led to his death in 877 (*v. infra*, p. 58).

In the meantime the struggle continued in Wessex. In 875 Alfred captured seven Danish ships. In 876 the southern division of the *here* slipped past the West Saxon *fyrd* and reached Wareham in Dorsetshire, but came to terms with Alfred. Though the peace was sworn with all solemnity on their sacred altar-ring, the mounted portion of the *here* slipped off once more and established themselves in Exeter. Their land forces were supported by a parallel movement of the fleet. At Exeter Alfred made peace with them and the *here* returned to Mercia. There half the land was divided up among the Danes while the southern half was left in the hands of Ceolwulf.

[27]

Alfred reached the nadir of his fortunes when the *here* returned to Wessex in the winter of 877-8, drove many of the inhabitants into exile across the sea, and received the submission of the rest with the exception of King Alfred and a few followers who took refuge in the Island of Athelney amid the Somersetshire marshes. Alfred soon gathered round him a force with which he was able to issue from his stronghold and ultimately to inflict a great defeat on the Danes at Edington near Westbury. They now made terms with Alfred by the peace of Wedmore, and agreed to leave Alfred's kingdom while their king Guthrum received Christian baptism. They withdrew first to Cirencester and then to East Anglia. Here they settled, portioning out the land as they had done in Northumbria and Northern Mercia. A peace was drawn up between Alfred and Guthrum of East Anglia defining the boundary between their realms. It was to run along the Thames estuary to the mouth of the Lea (a few miles east of London), then up the Lea to its source near Leighton Buzzard, then due north to Bedford, then eastwards up the Ouse to Watling St. somewhere near Fenny or Stony Stratford. From this point the boundary is left undefined, probably because the kingdoms of Alfred and Guthrum ceased to be conterminous here.

England now had peace for some twelve years. Alfred made good use of the interval in reorganising[28] his army and strengthening the kingdom generally, so that when attacks were renewed in 892 he was much better prepared to meet them. In the autumn of that year two fleets coming from France arrived in England: one landed on the Limen (between Hythe and Romney Marsh), the other under the leadership of Hæsten (O.N. Hásteinn) at Milton in North Kent. Alfred's difficulties were increased by the fact that during the next four years the Danish settlers in Northumbria and East Anglia played a more or less actively hostile part, both by land and sea. The Danes showed all their old mobility and in a series of raids crossed England more than once—first to Buttington on the Severn (co. Montgomery), then to Chester, and on a third occasion to Bridgenorth in Shropshire. They met with a uniformly stout and well organised resistance under the leadership of Alfred, his son Edward the Elder, and his brother-in-law Aethelred of Mercia, and in the end they had to retire with no fresh acquisition of territory. For the most part they distributed themselves among the East Anglian and Northumbrian Danes, but those who had no cattle wherewith to stock their land took ship and sailed back to the Seine. There were no further attacks from abroad during Alfred's reign, but piratical raids made by the East Anglian and Northumbrian Danes caused him a

good deal of trouble, and in order to meet them he definitely addressed[29] himself to the long delayed task of equipping a fleet. The vessels were carefully designed according to Alfred's own ideas: they were larger, swifter and steadier than the Danish vessels and they soon showed their worth when more than 20 vessels with their crews were lost by the Danes in one year. It is interesting to note that these vessels were manned in part by Frisian sailors, probably because of the low ebb to which English seamanship had sunk.

When once Edward the Elder's claim to the throne was firmly established in the battle fought at 'the Holm,' somewhere in South Cambridgeshire, he commenced, with the active co-operation of his brother-in-law Aethelred, ealdorman of Mercia, the great work of strengthening the hold of the English on Southern Mercia preparatory to an attempt to reconquer the Danelagh. Chester was rebuilt in 907. In 910 a fort was built at 'Bremesbyrig,' possibly Bromesberrow in Gloucestershire. Aethelred died in the next year, but his wife Aethelflæd, the 'Lady of the Mercians,' continued his work, and forts were built at 'Scergeat,' perhaps Shrewsbury, at Bridgenorth on the Severn, at Tamworth, and at Stafford in 912. In 914 Warwick was fortified, while in 915 forts were built at Chirbury in Shropshire and Runcorn in Cheshire.

On the death of Aethelred, Edward took London and Oxford and the parts of Mercia adhering to them[30] into his own hands. Two forts were built on the north and south sides of the Lea at Hertford in 911-12, and another at Witham on the Blackwater in Essex. Edward's work soon bore fruit, for we read that in the same year a large number of those who had been under Danish rule now made submission to the king. The Danes in the Five Boroughs became restless under the continued advance of the English, and twice in the year 913 they made raids from Leicester and Northampton as far as Hook Norton in Oxfordshire and Leighton Buzzard, while in the next year Edward, for the first time in his reign, was troubled by raiders from abroad. Coming from Brittany they sailed up the Severn, ravaged South Wales and the Archenfield district of Herefordshire, but could do nothing against the garrison of Gloucester, Hereford and other neighbouring towns, which seem already to have been fortified. They were forced to leave the district and so careful a watch did Edward keep over the coast of Somerset, Devon and Cornwall that they could make no effective landing, though they tried twice, at Porlock and at Watchet. Ultimately they took up their quarters in the islands of Flatholme and Steepholme in the Bristol Channel, but lack of food soon drove them away to Ireland in a starving condition. In the same year Edward built two forts at Buckingham, one on each side of the Ouse, and his policy again found[31] speedy justification when Earl Thurcytel (O.N. Þorkell) and all the chief men who 'obeyed[5]' Bedford, together with many of those who 'obeyed' Northampton submitted to him.

Everything was now ready for the great advance against the Danes. Derby fell in 917, while in the next year Leicester yielded without a struggle. Their fall was accompanied by the submission of the men of Derbyshire and Leicestershire. At the same time the inhabitants of York declared themselves ready to enter the service of Mercia. Edward fortified Bedford in 915, Maldon and Towcester in South Northamptonshire in 916. Again the Danes from

Northampton and Leicester tried to break through the steadily narrowing ring of forts and they managed to get as far south as Aylesbury, while others from Huntingdon and East Anglia built a fort at Tempsford in Bedfordshire near the junction of the Ivel and the Ouse. They besieged a fort at 'Wigingamere' (unidentified) but were forced to withdraw. Edward gathered an army from the nearest garrison towns, besieged, captured, and destroyed Tempsford (915). In the autumn he captured Colchester and a Danish[32] attempt on Maldon failed. Edward now strengthened Towcester and received the submission of Earl Thurfrith (O.N. Þorröðr) and all the Danes in Northamptonshire as far north as the Welland. Huntingdon was occupied about the same time and the ring of forts around East Anglia brought about the submission of the whole of that district, Cambridgeshire making a separate compact on its own account. In 918 Edward built a fort just south of Stamford and soon received the submission of the Danes of South Lincolnshire, and in the same year occupied Nottingham, building a fort and garrisoning it with a mixed English and Danish force. He was now ruler of the whole of Mercia owing to the death of his sister Aethelflæd, and in 919 he fortified Thelwall in Cheshire, on the Mersey, and rebuilt the old Roman fort at Manchester. In 920 he built a second fort at Nottingham and one at Bakewell in Derbyshire. The reconquest of the Danelagh was complete and Edward now received the submission of the Scots, the Strathclyde Welsh, of Regnold (O.N. Rögnvaldr) of Northumbria, and of English, Danes and Norsemen alike. The Danish settlers accepted the sovereignty of the West Saxon king and henceforward formed part of an expanded Wessex which had consolidated its power over all England south of a line drawn roughly from the Humber to the Dee.

[33]

The submission of Rögnvaldr, king of Northumbria and the mention of Norsemen need some comment. On the death of Halfdanr in 877 an interregnum of seven years ensued and then, in accordance with instructions given by St Cuthbert in a vision to abbot Eadred of Carlisle, the Northumbrians chose a certain Guthred (O.N. Guðröðr) as their king. He was possibly a nephew of the late king, ruled till 894, and was also known as Cnut (O.N. Knútr). We have coins bearing the inscription 'Elfred rex' on the obverse and 'Cnut rex' on the reverse, indicating apparently some overlordship of king Alfred. Together with these we have some coins with 'Cnut rex' on the obverse and 'Siefredus' or (Sievert) on the reverse, and others, minted at 'Ebroice civitas' (i.e. York), with the sole inscription 'Siefredus rex.' This latter king would seem to have been first a subordinate partner and then, on Guðröðr's death, sole ruler of Northumbria. Other coins belonging to about the same period and found in the great Cuerdale hoard near Preston, bear the inscription 'Sitric Comes,' and there is good reason to believe that Siefredus (O.N. Sigröðr) and Sitric (O.N. Sigtryggr) are to be identified with Sichfrith and Sitriucc who just at this time are mentioned in the Irish annals as rival leaders of the Norsemen in Dublin. The identification is important as it shows us that Northumbria was now being[34] brought into definite connexion with the Norse kingdom of Dublin and that the Norse element was asserting itself at the expense of the Danish in Northern England.

The rule of Sigröðr and Sigtryggr alike had come to an end by 911 and we know nothing more until the year 918 when a fresh invasion from Ireland took place under a certain Rögnvaldr. He gained a victory at Corbridge-on-Tyne and captured York in 919 or 920. He divided the lands of St Cuthbert among his followers but died in 921, the year of his submission to the overlordship of Edward. The Irish annals speak of him as king of White and Black foreigners alike, thus emphasising the composite settlement of Northumbria.

Another leader from Ireland, one Sigtryggr, succeeded Rögnvaldr as king of Northumbria. He was on friendly terms with Aethelstan and married his sister in 925. He died in 926 or 927 and then Aethelstan took Northumbria under his own control. Sigtryggr's brother Guðröðr submitted to Aethelstan but after four days at the court of king Aethelstan 'he returned to piracy as a fish to the sea.' Both Sigtryggr and Guðröðr left sons bearing the name Anlaf (O.N. Ólafr) and with them Aethelstan and his successors had much trouble. Anlaf Sihtricsson lived in exile in Scotland and gradually organised against Aethelstan a great confederacy of Scots, Strathclyde^[35] Welsh and Vikings, both Danish and Norwegian, Anlaf Godfreyson brought help from Ireland and the great struggle began. The course of the campaign is uncertain but if the site of its main battle, 'Brunanburh,' is to be identified with Birrenswark Hill in S.E. Dumfriesshire, it would seem that Aethelstan carried the war into the enemy's country. The result of the battle was a complete victory for the forces of Aethelstan and his brother Edmund. Constantine's son, five kings and seven jarls were among the slain. We have in the Anglo-Saxon Chronicle a poem^[6] celebrating the victory, and it describes in vivid language the hurried return home of Constantine, lamenting the death of his son, and the headlong flight of Anlaf Godfreyson to Dublin. England had been freed from its greatest danger since the days of king Alfred and his struggle with Guthrum.

Aethelstan had no more trouble with the Norsemen and we have evidence from other sources that at some time during his reign, probably at an earlier date, he exchanged embassies with Harold Fairhair, king of Norway. The latter sent him a present of a ship with golden prow and purple sails and the usual bulwark of shields along the gunwale, while Harold's favourite son Hákon was brought up at Aethelstan's court. There he was baptised and educated and is known in Norse history as Hákon Aðalsteinsfóstri.

[36]

After the death of Aethelstan, Anlaf Sihtricsson, nicknamed Cuaran (i.e. with the sock or brogue of leather, so called from his Irish dress) came to England and captured York. From there he made an attempt to conquer the Danish district of the Five Boroughs. He seems to have got a good part of Mercia into his hands but in the end Edmund freed the Danes from Norse oppression and took once more into his hands all Mercia south of a line from Dore (near Sheffield) to Whitwell (Derbyshire) and thence to the Humber. Edmund and Anlaf came to terms, but Anlaf was driven out by the Northumbrians in 943, and in the next year that province fell into the hands of Edmund. In 947 Eric Blood-axe, son of Harold Fairhair, was accepted as king by the Northumbrians. In Scandinavian tradition we learn how he was

expelled from Norway in 934 by the supporters of Hákon, went on Viking raids in the west, was appointed ruler of Northumbria by Aethelstan on condition of his defending it against attack, but was not on good terms with Edmund, who favoured one Ólaf. Probably Eric retired after Aethelstan's death and only returned to England in 947. In 948 Edmund forced the Northumbrians to abandon his cause and about the same time Anlaf^[37] returned from Ireland and ruled till about 950 when he was replaced by Eric, whose short rule came to an end in 954. In that year he was expelled by the Northumbrians and killed at Stainmoor in Westmorland. The attempt to establish a Norse kingdom of Northumbria had failed and henceforward that district was directly under the rule of the English king. English authority was supreme once more even in those districts which were largely peopled with Scandinavian settlers.

England had no further trouble with Norse or Danish invaders until the days of Ethelred the Unready, but no sooner did that weak and ill-advised king come to the throne than, with that ready and intimate knowledge of local conditions which they always displayed, we find Danes making an attack on Southampton and Norsemen one on Chester. The renewed attacks were not however due solely to the weakness of England, they were also the result of changed conditions in Scandinavia itself. In Denmark the reign of Harold Bluetooth was drawing to a close, and the younger generation, conscious of a strong and well-organised nation behind them, were ambitious of new and larger conquests, while at the same time many of them were in revolt against the definitely Christian policy of Harold in his old age. They turned with hope towards his young son Svein, and found in him a ready and willing leader. In^[38] Norway, Earl Hákon had broken away from the suzerainty of Harold Bluetooth, but the Norwegians could not forget that he owed his throne to a foreign power, and his personal harshness and licentiousness as well as his zealous cult of the old heathen rites were a cause of much discontent. The hopes of the younger generation were fixed on Olaf Tryggvason, a man filled with the spirit of the old Vikings. Captured by pirates from Esthonia when still a child, he was discovered, ransomed, and taken to Novgorod, where he entered the service of the Grand Duke Vladimir. Furnished by him with a ship he went 'viking' in the Baltic and then ten years later we find him prominent among the Norsemen who attacked England in the days of king Ethelred. In 991 a Norse fleet under Olaf visited Ipswich and Maldon. Here they met with a stout resistance headed by the brave Byrhtnoth, earl of Essex, and in the fragmentary lay of the fight at Maldon^[7], which has been preserved to us, we see that there was still much of the spirit of the heroic age left in the English nation even in the days of Ethelred II. It was to buy off this attack that a payment of Danegeld to the extent of some ten thousand pounds was made. From Maldon Olaf went to Wales and Anglesey and it was somewhere in the west that^[39] he received knowledge of the Christian faith from an anchorite and was baptised. He did not however renounce his Viking-life, but joined forces with his great Danish contemporary Svein Forkbeard. Bamborough was sacked in 993, and both were present at the siege of London in 994, when they sailed up the Thames with 490 ships. The attack was a failure and Olaf came to terms with Ethelred agreeing to desist from further attack in return for a payment of sixteen thousand pounds of Danegeld. Olaf was the

more ready to make this promise as he was now addressing himself to the task of gaining the sovereignty of Norway itself. Many of the Norsemen returned with Olaf but the attacks on the coast continued and the invaders, chiefly Danes now, ravaged the country in all directions. Treachery was rife in the English forces and again and again the ealdormen failed in the hour of need. Danegeld after Danegeld was paid in the vain hope of buying off further attacks, and the almost incredible sum of 158,000 pounds of silver (i.e. some half million sterling) was paid as Danegeld during a period of little more than 20 years. Once or twice Ethelred showed signs of energy; once in 1000 when a fleet was sent to Chester, which ravaged the Isle of Man while an army devastated Cumberland, and again in 1004 when a great fleet was made ready but ultimately proved of no use. Ethelred's worst stroke^[40] of policy was the order given in 1002 for the massacre on St Brice's Day of all Danes settled in England. His orders were carried out only too faithfully and among the slain was Svein's sister Gunnhild, the wife of a Danish jarl in the king's service. Svein's vengeance was relentless, and during the next ten years the land had no peace until in 1013 Ethelred was driven from the throne, and Svein himself became king of England. Svein died in 1014 and his son Cnut succeeded to his claim. Ethelred was invited by the *witan* to return, and ultimately Wessex fell to Cnut, while the district of the Seven Boroughs (the old five together with York and Chester) and Northumbria passed into the hands of Ethelred, or rather of his energetic son Edmund. This division of the country placing the district once settled by Danes and Norsemen under an English king while the heart of England itself was in the possession of a Scandinavian king shows how completely the settlers in those districts had come to identify themselves with English interests as a whole. Mercia was nominally in Ethelred's power, but its ealdorman, Eadric Streona, was the most treacherous of all the English earls. On Ethelred's death in 1016 the *witan* chose Edmund Ironside as king and a series of battles took place culminating in that at Ashingdon in Essex where the English were completely defeated through the treachery of Eadric. A division of the kingdom^[41] was now made whereby Wessex fell to Edmund, Mercia and Northumbria to Cnut—thus easily was the allegiance of the various districts transferred from one sovereign to another. Edmund only lived a few months and Cnut then became king of all England. For twenty years the land enjoyed peace and prosperity. In 1018 the greater part of the Danish army and fleet returned to Denmark, some forty ships and their crews sufficing Cnut for the defence of his kingdom. During the next four years he received the submission of the king of Scotland and made a memorable pilgrimage to Rome. The most important event of his later years was however his struggle with Olaf the Stout, the great St Olaf of Norway.

Norway was now entirely independent of Danish sovereignty and when Cnut sent an embassy voicing the old claims of the Danish kings he received a proudly independent answer from St Olaf. For the time being Cnut had to be satisfied, but in 1025 he sailed with a fleet to Norway, only to suffer defeat at the Battle of the Helge-aa (i.e. Holy River) in Skaane, at the hands of the united forces of Norway and Sweden. Three years later the attack was renewed. Olaf's strenuous and often cruel advocacy of the cause of Christianity had alienated many of his subjects and the Swedes had deserted their ally. The result was that

Olaf fled to Russia and Cnut was^[42] declared king of Norway. Two years later the exile returned and fell fighting against his own countrymen. Cnut was now the mightiest of all Scandinavian kings, but on his death in 1035 his empire fell apart; Norway went to his son Svein, Denmark to Harthacnut and England to Harold Harefoot. Harold was succeeded by Harthacnut in 1040, but neither king was of the same stamp as Cnut and they were both overshadowed by the great Godwine, earl of Wessex. When Harthacnut died in 1042 the male line in descent from Cnut was extinct, and though some of the Danes were in favour of choosing Cnut's sister's son Svein, Godwine secured the election of Edward the Confessor. With the accession of Edward Danish rule in England was at an end and, except for the ambitious expedition of Harold Hardrada, foiled at Stamford Bridge in 1066, there was no further serious question of a Scandinavian kingship either in or over England.

The sufferings of England during the second period of invasion (980-1016) were probably quite as severe as in the worst days of Alfred—the well-known *Sermo Lupi ad Anglos*, written by Archbishop Wulfstan of York in 1014, draws a terrible picture of the chaos and anarchy then prevailing—but we must remember that neither these years nor the ensuing five and thirty years of Danish kingship left as deep a mark on England as the earlier wars and the settlements resulting from them. There was no^[43] further permanent occupation or division of territory and though some of the earldoms and the great estates passed into the hands of the king's Danish followers, there was no transformation of the whole social life of the people such as had taken place in the old Danelagh districts.

FOOTNOTES:

[5] This phrase is used repeatedly in the Chronicle in connexion with such towns as Bedford, Cambridge, Derby, Leicester and Northampton, and there can be no question that these groups represent the shires which now take their names from these towns. For purposes of convenience we shall henceforward speak of such groups as 'shires.'

[6] See Tennyson's translation.

[7] See Freeman's *Old English History for Children* for a translation of this poem.

CHAPTER IV THE VIKINGS IN THE FRANKISH EMPIRE TO THE FOUNDING OF NORMANDY (911)

The years from 850-865 were perhaps the most unhappy in the whole history of the sufferings of the Frankish empire under Viking attack. The Danes now took up more or less permanent quarters, often strongly fortified, on the Scheldt, the Somme, the Seine, the Loire and the Garonne, while Utrecht, Ghent, Amiens, Paris, Chartres, Tours, Blois, Orléans, Poitiers, Limoges, Bordeaux and many other towns and cities were sacked, often more than

once. When Hrœrekr obtained from the young Hárekr of Denmark a concession of certain districts between the Eider and the sea, he gave trouble in that direction and sailed up the Elbe and the Weser alike. His nephew Guðröðr was in occupation of Flanders and the lower valley of the Scheldt.

[44]

Besides these Viking leaders, who were active in the Low Countries, we have the names of several others who were busy in France itself. The most famous of these were the sons of Ragnarr Loðbrók. Berno, who first appeared on the Seine in 855, was Björn Ironside, while it is quite possible that the Sidroc who accompanied him was Sigurd Snake-eye, another son of that famous leader. With Björn, at least according to Norman tradition, came Hastingus (O.N. Hásteinn), his foster-father. Hásteinn was destined to a long and active career. We first hear of him in the annals in 866 when he appeared on the Loire, and it was he who was one of the chief leaders in the great Danish invasion of England in 892-4. The sudden appearance of these leaders was undoubtedly due, as suggested in the previous chapter, to the turn of events in Denmark at this time. During the year of the revolution—854—no attacks were made on France at all and then immediately after came a flood of invaders. The Seine was never free from 855-62 and the Loire district was little better off. The troubled and desolate condition of the country may be judged from the numerous royal decrees commending those who had been driven from their land to the protection of those with whom they had taken refuge and exempting them from payment of the usual taxes. Many even deserted their Christian faith and became worshippers of the gods of the[45] heathen. The difficulties of Charles the Bald were greatly increased by succession troubles both in Brittany and Aquitaine. Now one, now another claimant allied himself with the Northmen, and Charles himself was often an offender in this respect. He initiated the disastrous policy of buying off attack by the payment of large sums of what in England would have been called Danegeld. In 859 occurred an incident which throws a curious light on the condition of the country. The peasants between the Seine and the Loire rose of their own accord and attacked the Danes in the Seine valley. It is not quite clear what followed, but the rising was a failure, and possibly it was crushed by the Frankish nobles themselves who feared anything in the nature of a popular rising made without reference to their own authority. In any case the incident bears witness to a lack of proper leadership by the nobles.

After the year 865 the tide of invasion set from France towards England. These were the years of Alfred's great struggle, and Danish efforts were concentrated on the attempt to reduce that monarch to submission. The Franks themselves had begun to realise the necessity of more carefully organised resistance. They began building fortified bridges across the rivers at certain points in order to stop the passage of Viking ships, and they also fortified several of their towns and cities, thus giving perhaps[46] a hint for the policy later adopted in England by Edward the Elder. Probably the Franks were not above taking lessons from their enemies in the matter of fortification, for the latter had already shown themselves approved masters of the art in such fortified camps as that at Jeufosse on the Seine. In

another way also had the Danes showed themselves ready to adapt themselves to new fighting conditions. Not only did they build forts, but we hear of them as mounted, and henceforward horses played an important part in their equipment both in France and England.

During these years the Vikings made one notable expedition far beyond the ordinary range of their activity. Starting from the Seine in 859 under the leadership of Björn and Hásteinn, they sailed round the Iberian Peninsula through the Straits of Gibraltar. They landed in Morocco and carried off prisoners many of the Moors or 'Blue-men' as they called them. Some of these found their way to Ireland and are mentioned in certain Irish annals of the period. After fresh attacks on Spain they sailed to the Balearic Isles, and Roussillon, which they penetrated as far as Arles-sur-Tech. They wintered in the island of Camargue in the Rhone delta and then raided the old Roman cities of Provence and sailed up the Rhone itself as far as Valence. In the spring of the next year they sailed to Italy. They^[47] captured Pisa and Luna (at the mouth of the Magra), the latter being taken by a clever stratagem. Hásteinn feigned himself sick unto death and was baptised by the bishop of Luna during a truce. Then news came that Hásteinn was dead and the Vikings asked Christian burial for him. Permission was given and a mock funeral procession entered the city. It was in reality a band of armed men in disguise and the city was soon captured. The real aim of the Vikings in this campaign was the capture of Rome with its mighty treasures, but, for some reason unknown, they made no advance further south. Scandinavian tradition said it was because they mistook Luna for Rome and thought their work already done! Sailing back through the Straits of Gibraltar they returned to Brittany in 862. The Vikings had now almost encircled Europe with their attacks, for it was in the year 865 that the Swedish Rhôs (Russians) laid siege to Constantinople.

When Alfred secured a definite peace with the Danes in 878, those who were averse to settling permanently returned to their old roving life. They made their way up the Somme and the Scheldt and their progress was not stopped by a brilliant victory gained by the young Lewis III in June 881 at Saucourt, near the Somme, a victory which is celebrated in the famous *Ludwigslied*. During the same years, another Viking host invaded Saxony^[48] winning a decisive victory over Duke Bruno on the Lüneburg Heath. After their defeat at Saucourt the main body of the Danes made their way to Elsloo on the Meuse whence they ravaged the Meuse, Rhine and Moselle districts plundering Cologne, Bonn, Coblenz, Aachen, Trèves and Metz. So alarmed was the emperor Charles the Fat that he entered into negotiations with the Danish king Guðröðr who was with the forces at Elsloo. He secured Guðröðr's acceptance of Christianity and the promise of security from further attack at the price of a large payment of Danegeld and the concession to Guðröðr of the province once held by Hrærekr, with large additions. The exact extent of the grant is uncertain, but it included the district of Kinnem (round Alkmaar and Haarlem) and probably covered the greater part of Modern Holland from the Vlie to the Scheldt. Here Guðröðr lived in semi-independence and might perhaps have established another Normandy within the empire had

he not been ruined by too great ambition. He entirely failed to defend his province from attacks, indeed he probably gave them covert support; he intrigued with Hugo, the bastard son of Lothair II, against the emperor, married his sister Gisla, and then asked for additional territories on the Rhine and the Moselle, on the plea that his own province included no vine-growing districts. Guðröðr had now overstepped all reasonable limits:[49] the emperor entered into negotiations with him but secured his death by treachery when a meeting was arranged near Cleves. With the fall of Guðröðr Danish rule in Frisia came to an end, and though we hear of isolated attacks even during the early years of the 10th century, there was no more serious trouble in that district.

In the autumn of 882, encouraged doubtless by the news of the death of Lewis III, the Danes returned from the Meuse to Flanders and during the next three years ravaged Flanders, Brabant and Picardy, establishing themselves strongly at Louvain. In 885 they abandoned these districts and sailed up the Seine, after a nine years' absence. In November they reached Paris with a fighting force of some 30,000 men and a fleet of 700 vessels. The passage up the river was stopped by fortified bridges and the besiegers were fortunate in having as leaders two men of great ability and courage, first Gauzlin, Abbot of St Germain's, and, later, Count Odo of Paris. The position of Paris was at times desperate. The Danes were exasperated by the stout defence and in their eagerness to plunder further up the river dragged many of their ships some two miles overland past Paris, and so reached the upper waters of the Seine. Later, as the result of peaceful negotiations, they obtained permission to pass the bridges on condition that they only ravaged Burgundy, leaving[50] the Seine and Marne districts untouched; thus had the provinces of the Frankish empire lost all sense of corporate union. The Danes soon made their way as far west as Verdun. Here however they were disastrously defeated by Odo, now king of the West Franks (June 888), and in the next year they finally abandoned the siege of Paris making their way to Brittany.

In Brittany they found another army already busy. The Bretons had won a great victory in the autumn of 888 when only 400 out of some 15,000 Danes made their way back to their fleet. The great *here* from the Seine now joined forces with the remnants of this army, but proved powerless against Duke Alan, and some returned to Flanders in 890, while Hásteinn with the rest sailed to the Somme. The Danes in Flanders were defeated by Arnulf (afterwards emperor) on the Dyle, near Louvain, in 891, but it had no great effect for soon after we find them again as far east as Bonn. A bad harvest in the summer of 892 brought famine in its train and this was more effective in ridding the land of invaders. In the autumn of the year the whole army, horses and all, crossed in one passage in some 250 ships from Boulogne to the mouth of the Limen in Kent and, shortly after, Hásteinn with a fleet of 80 ships left the Somme and sailed to Milton in North Kent. The story of the campaigns there has already been[51] told. For the first time since 840 the Frankish empire was free from invaders. Grievous as were the losses of the Franks, it is well to remember that those of the Danes

had been great also. Their fleet had been reduced from 700 to 250 ships, and as the whole army could still go to England in one crossing, that must also have been reduced from thirty to ten or fifteen thousand men.

When the English invasion had failed, those who could not settle in England returned to their French haunts once more. A small force of eight ships and some 200 men sailed up the Seine under one 'Huncdeus' and gradually their numbers were increased by fresh arrivals from abroad. They made their way north to the Meuse, south to the Loire, and east to Burgundy, but their head quarters were on the lower waters of the Seine. In 903 other invaders appeared on the Loire under leaders named Baret (O.N. Bárðr) and Heric (O.N. Eiríkr). The name of Bárðr is mentioned more than once in the contemporary history of the Norsemen in Ireland, and as the Norsemen were driven from Dublin in 902 it is probable that these invaders came from there. The expedition was not a success and the Vikings soon sailed away again. Of the history of the settlers on the Seine after 900 we unfortunately know practically nothing. The Norman historian Dudo attempted in the 11th century to give a connected account but his^[52] narrative is confused and unreliable. Odo was dead and Charles the Simple was more interested in conquering Lorraine than defending Neustria. The clergy were weary of the ceaseless spoiling of the monasteries and anxious for the conversion of the heathen, while the nobles were, as usual, selfish and careless of the interests of the country at large. The Northmen made no great expeditions between 900 and 910, but maintained a steady hold on the Lower Seine and the districts of Bessin and Cotentin. They could not extend their territories and the Franks could not drive them from the Seine. At length, largely through the intervention of the clergy, a meeting was arranged between Charles and the Viking leader Rollo at St Clair-sur-Epte, before the end of 911. Here the province later known as Normandy (including the counties of Rouen, Lisieux, Evreux and the district between the rivers Bresle and Epte and the sea) was given to Rollo and his followers as a *beneficium*, on condition that he defended the kingdom against attack, and himself accepted Christianity. The Danes now formed a definite part of the Frankish kingdom and occupied a position analogous to that of their countrymen in East Anglia, Northumbria and Mercia in England, except that the latter after a period of freedom had in course of time to pass definitely under English rule.

The story of the foundation of Normandy is^[53] obscure: still more obscure is the origin and history of the leader of the Northmen at this time. Norse tradition, as given by Snorri Sturluson, makes Rollo to be one Hrólf, son of Rögnvaldr earl of Möre, who was exiled by Harold Fairhair and led a Viking life in the west. Norman tradition, as found in Dudo, made him out the son of a great noble in Denmark, who was expelled by the king and later went to England, Frisia and Northern France. Dudo's account of the founding of Normandy is so full of errors clearly proven that little reliance can be placed on his story of the origin of Rollo. The *Heimskringla* tradition was recorded much later, but is probably more trustworthy, and it would be no strange thing to find a man of Norse birth leading a Danish host. Ragnarr Loðbrók and his sons were Norsemen by family but they appear for the most part as leaders

of Danes. How Rollo came to be the leader of the Danes in France and what his previous career had been must remain an unsolved mystery. His name is not mentioned apart from the settlement of Normandy.

The Normans continued to ravage Brittany without any interruption and they were soon granted the further districts of Bayeux, Seez, Avranches and Coutances, which made Brittany and Normandy conterminous.

[54]

CHAPTER V THE VIKINGS IN IRELAND TO THE BATTLE OF CLONTARF (1014)

In the history of the Vikings in Ireland we have seen how the attempt made by Turges to bring all Ireland under one ruler came to nought by his death in 845. At first this seems to have thrown the Norsemen into confusion and we hear of a series of defeats. Then, in 849, the invasions developed a new phase. Hitherto while the Irish had been weakened by much internecine warfare, their enemies had worked with one mind and heart. Now we read of 'a naval expedition of seven score of the Foreigners coming to exercise power over the Foreigners who were before them, so that they disturbed all Ireland afterwards.' This means that the Danes were now taking an active part in the invasions of Ireland, and we soon find them disputing the supremacy with the earlier Norse settlers. A full and picturesque account of the struggle is preserved for us in the second of the *Three Fragments of Irish Annals* copied by Dugald MacFirbis. Unfortunately the chronology of these annals is in a highly confused state and it is often difficult to trace the exact sequence of events.

When the Norsemen first saw the approaching[55] fleet they were much alarmed. Some said it was reinforcements from Norway, but others, with keener insight, said they were Danes who were coming to harry and plunder. A swift vessel was dispatched to find out who they were, and when the steersman called out to them inquiring from what land they came and whether as friend or foe, the only answer was a shower of arrows. A fierce battle ensued, in which the Danes killed thrice their own number and carried off the women-folk and property of the Norsemen. In 851 they plundered the Norse settlements at Dublin and Dundalk, but in the next year the Norsemen attacked them in Carlingford Lough. At first the Danes were defeated, but then their leader cunningly exhorted his men to secure by their prayers and alms the patronage of St Patrick, who was incensed against the Norsemen because of the many evil deeds they had wrought in Erin. The battle was renewed and the Danes were victorious. After the battle they made rich gifts to St Patrick for 'the Danes were a people with a kind of piety: they could for a time refrain from meat and from women.' After the fight we learn that the Danes cooked their meat in cauldrons supported on the bodies of their dead

foes. The Danes now helped Cerbhal, king of Ossory, against the Norsemen who were harrying Munster, and henceforward we hear again and again how the various Irish factions made^[56] use of the dissensions among the invaders to further their own ends.

Matters were further complicated by the fact that many of the Irish forsook their Christian baptism and joined the Norsemen in their plundering. These recreant Irish were known as the Gaill-Gaedhil (i.e. the foreign Irish), and played an important part in the wars of the next few years. The Gaill-Gaedhil were undoubtedly a race of mixed Norse and Gaelic stock and we must not imagine that they sprung suddenly into existence at this time. Long before this the Norsemen and the Gaels must have had considerable peaceful intercourse with one another in their various settlements, and in accordance with well-established Scandinavian custom it would seem that many of the Irish were brought up as foster-children in Norse households and must soon have learned to accept their religion and customs. There was also extensive intermarriage between Norsemen and Irish. The annals speak of several such unions, the most famous being the marriage of Gormflaith, afterwards wife of Brian Borumha, to Anlaf Sihtricsson, while in the genealogies of the Norse settlers in Iceland at the end of this century, Gaelic names are of frequent occurrence. One of the most famous of the leaders of these 'foreign Irish' was Ketill Finn (i.e. the White), a Norseman with an Irish nickname. These foreign Irish fought either by the side of the^[57] foreigners or on their own account and we have an interesting story telling how, when Vikings from Ireland made an invasion of Cheshire (c. 912), Aethelflæd, the lady of the Mercians, sent ambassadors to those Irish who were fighting on the side of the invaders, calling upon them to forsake the pagans and remember the old kindness shown in England to Irish soldiers and clergy.

The troubles between Norsemen and Danes were probably responsible for the arrival in Ireland in 853 of Amhlaeibh, son of the king of Norway, to receive the submission of the foreigners. This Amhlaeibh is Olaf the White of Norse tradition. Olaf is represented as ruling together with his brother Imhar (O.N. Ívarr). The annals are not very good authority for the relationship of the Norse leaders to one another, and it is quite possible that Ívarr is really Ívarr the Boneless, son to Ragnarr Loðbrók. Under the strong rule of Olaf and Ívarr Dublin became the chief centre of Scandinavian rule in Ireland, and the Danes and Norsemen were to some extent reconciled to one another. The Irish suffered great losses but some brave leaders were found to face the Norsemen. Cennedigh, king of Leix (Queen's County), came upon a party of them laden with booty; they abandoned the spoil and rushed upon Cennedigh with angry barbarous shouts, blowing their trumpets and many of them crying *nui, nui* (i.e. probably, in^[58] the old Norse speech, *knúi, knúi*, 'hasten on, hasten on'). Many darts and spears were thrown and at last they took to their heavy powerful swords. All was however of no avail and Cennedigh won a great victory. Less fortunate was Maelciarain, 'champion of the east of Ireland and a hero-plunderer of the foreigners.' He was expelled from his kingdom by the Leinstermen, who envied him in consequence of his many victories over the Norsemen!

The activities of Olaf and Ívarr were not confined to Ireland. In 866 Olaf paid a visit to Scotland, while in 870 both Olaf and Ívarr were present at the siege of Dumbarton. If Ívarr is Ívarr the Boneless, he must then have gone to England and taken part in the martyrdom of St Edmund. In the next year both leaders returned to Dublin with a large number of prisoners—English, Britons and Picts. In 873 Ívarr, 'king of the Norsemen of all Ireland and Britain' died, and about the same time Olaf returned to Norway, possibly to take part in the great fight against Harold Fairhair at Hafrsfjord. The Danes seem to have taken advantage of the removal of Olaf to attempt to throw off the Norse yoke. Fresh fighting took place and the Danes under Albdann, i.e. Halfdanr, king of Northumbria, were defeated on Strangford Lough in 877 with the loss of their leader.

After 877 the *War of the Gaedhil with the Gaill* notes a period of rest for Ireland, lasting some forty[59] years. This is true to the extent that no large fleets of fresh invaders seem to have come to Ireland during this time—the Vikings were too busy elsewhere, both in England and the Frankish empire—but there were occasional raids from Dublin, Cork, Limerick, Waterford and other towns into various districts of Ireland, and the Norsemen were often at variance amongst themselves. Dissensions in Dublin were particularly violent and so much did they weaken Norse rule there that in 902 Dublin fell into the hands of the Irish. The Vikings were driven abroad, some going to Scotland and others to England, where they besieged Chester (*v. supra*, p. 57). In the year 914 all the old troubles were renewed. Rögnvaldr, a grandson of Ívarr, fresh from a great victory off the Isle of Man, captured Waterford, and two years later Sigtryggr, another grandson of Ívarr regained Dublin. The Irish attempted resistance under the *ardrí* Niall Glundubh, but he fell with twelve other kings in a fight at Kilmashogue near Dublin in 919. During the next fifty years Ireland was a prey to ceaseless attacks by Norwegians and Danes alike. Towards the close of the 9th century Limerick had become a stronghold of the Norsemen in the west, and from there they made their way up the Shannon into the heart of the country. Cork was settled in the early years of the 10th century, chiefly by Danes, and from there all Munster was open to attack. Waterford[60] and Wexford, which stood as a rule in close connexion with Dublin, served as centres of attack against Leinster. The Irish made a stout resistance under able leaders and Dublin was 'destroyed' more than once. First among these leaders stands Muirchertach 'of the leather cloaks,' son of Niall Glundubh, a hero who came forward about the year 926. His activities were unceasing. He repeatedly attacked Dublin, took a fleet to the Hebrides where he defeated the Vikings, gaining much spoil, and finally in 941 made a circuit of Ireland, from which he brought back as hostages many provincial kings, including the Norse ruler of Dublin. More famous still in Irish song and story was Cellachan of Cashel. He made war against the Vikings in Munster and for a time had the Norse kingdom of Waterford under his control. Similarly he conquered Limerick, and we find him fighting side by side with Norsemen from both these towns. During these fifty years the Norse kingdom in Dublin stood in close relation with the Scandinavian kingdom of Northumbria. Rögnvaldr, who died in 912, ruled there and so did his brothers Sigtryggr (d. 927) and Guðröðr (or Godfrey) (d. 934). The brothers left sons known respectively as Anlaf Sihtricsson and Anlaf Godfreyson. The latter took part in the great fight

at Brunanburh and died in 939. Anlaf Sihtricsson was destined to a longer career. He would seem to have^[61] spent his early years in Scotland where he married king Constantine's daughter. It is uncertain whether he fought at Brunanburh, but he came to Northumbria in 941 and captured York. He was expelled from Northumbria in 944 or 945 and retired to Dublin, and the rest of his life was chiefly spent in fighting in Ireland. He was in close alliance with the Norsemen in Man and the Western Islands, and was, for some thirty years, the most powerful Norse ruler in Ireland. Then came the first great blow to Norse rule in Ireland. In 980 Maelsechlainn II, the *ardri*, won a great victory at Tara over the foreigners of Dublin and the Islands in which Anlaf's son was slain. The power of the kingdom of Dublin was effectually broken. The Norsemen were compelled to liberate all the hostages in their custody, to pay a fine of 2000 oxen and to remit the tribute which they had imposed on all Ireland from the Shannon eastwards to the sea. Anlaf abandoned his authority and retired on a pilgrimage to Iona, where he died in the same year an inmate of its monastery.

In the meantime events, fraught with important consequences for Norse rule in that country, were gradually developing in a distant quarter of Ireland. In the province of Munster the Dalcassian line of princes first comes into prominence about the middle of the 10th century, and the two most famous of these princes were the brothers Mathgamhain and Brian,^[62] commonly known as Brian Borumha. Together the brothers conquered Munster in spite of the support given to the Irish by the Viking settlers, and when their success aroused Ívarr, the ruler of Limerick, they attacked him and won a great victory at Sulcoit near Tipperary (968). Limerick was captured, Mathgamhain died in 976 and Brian was soon acknowledged king of all Munster. He next became master of Leinster, but his rapid advance brought him into conflict with the *ardri* and by a compact made in 998, Maelsechlainn practically surrendered the southern half of Ireland to Brian. The ruler of Dublin at this time was Sigtryggr of the Silken Beard, son of Anlaf and Gormflaith, sister of Maelmordha, king of Leinster. In 1000 Leinster with the support of the Norsemen in Dublin revolted, but Brian defeated them and captured Dublin, giving his daughter in marriage to Sigtryggr and himself marrying Gormflaith. In 1002 Maelsechlainn submitted to Brian and the latter became *ardri*. There followed twelve years of peace, but Brian's marriage with Gormflaith was his undoing. Quarrelling with her husband, she stirred up Maelmordha of Leinster against him. An alliance was formed between Maelmordha and Sigtryggr, and Gormflaith dispatched embassies to all the Viking settlements in the West, summoning them to the aid of Sigtryggr in a great fight against Brian. Sigtryggr secured the help^[63] of Earl Sigurd of the Orkneys and North Scotland by promise of the kingship of Dublin. Ships came from all parts of the Viking world, from Northumbria, from Man and the Western Islands, from Scotland and the Orkneys, and even from Iceland. Dublin was fixed as the trysting-place and Palm Sunday 1014 was to be the time of meeting. Brian mustered all the forces of Munster and Connaught and was joined in half-hearted fashion by Maelsechlainn, who was really waiting to see which way the fortunes of war would turn. Brian advanced into the plain of Fingall, north of Dublin, and the two armies faced one another at Clontarf all Passion week. The Norsemen had learned by magic incantations that if the fight took place before Good Friday their chiefs would perish

and their forces be routed, while if the fight took place on Good Friday Brian himself would perish but the Irish would win the day. So they waited until the Friday and then made their attack. The fight was long and the slaughter was terrible. Brian and Sigurd were themselves numbered among the slain. In the end the Norsemen were defeated and Maelsechlainn completed their discomfiture when he cut down the fugitives as they tried to cross the bridge leading to Dublin and so reach their ships. No fight was more famous in Irish history and it seems to have appealed with equally strong force to Scandinavian imagination.[64] Clontarf and Brunanburh are the two great Viking battles which find record in Scandinavian saga, and in the story of *Burnt Njal*[8] we have a vivid account both of the actual battle and of the events leading up to it. Yet more interesting perhaps is the old lay preserved to us, the *Song of the Valkyries*, who that same day were seen in Caithness riding twelve together to a bower where they set up a loom of which men's heads were the weights, men's entrails the warp and woof, while a sword was the shuttle and the reels were arrows. They wove the web of war and foretold the fate of king Sigtryggr and Earl Sigurd as well as the sharp sorrow which would befall the Irish[9]. The Norse world was full of this and like portents and there can be no question that the Vikings were themselves conscious that the battle of Clontarf marked a very definite epoch in the history of the Vikings in the West and in Ireland more particularly. The Norsemen remained in possession of their cities, Sigtryggr continued as king of Dublin, but gradually the fortunes of the Norse settlers tended to become merged in the history of the nation as a whole and there was no further question of Scandinavian supremacy in Ireland.

FOOTNOTES:

[9] This song was probably composed soon after the events with which it is concerned and was first rendered into English by the poet Gray under the title *The Fatal Sisters*.

[65]

CHAPTER VI THE VIKINGS IN THE ORKNEYS, SCOTLAND, THE WESTERN ISLANDS AND MAN

When the Vikings sailed to England and Ireland in the late 8th and early 9th centuries their most natural path was by the Orkneys and Shetlands and round the Western Islands of Scotland. We have seen how early they formed settlements in the Shetlands, and they soon reached the Orkneys and the Hebrides. From the Orkneys they crossed to the mainland, to Sutherland and Caithness—the very names bear witness to Scandinavian occupation—while Galloway (i.e. the land of the Gaill-Gaedhil, v. *supra*, p. 56) was settled from the Isle of Man. Already in the 9th century the Norse element in the Hebrides was so strong that the Irish

called the islands *Innsi-Gall* (i.e. the islands of the foreigners), and their inhabitants were known as Gaill-Gaedhil. The Norsemen called the islands *Suðreyjar* (i.e. Southern Islands) in contrast to the Orkneys and Shetlands, which were known as *Norðreyjar*, and the name survives in the composite bishopric of 'Sodor' and Man, which once formed part of the archdiocese of Trondhjem in Norway. The Isle of Man was plundered almost as early as any of the islands of the West (*v. supra*, p. 12), and it[66] was probably from Man that the Norse settlements in Cumberland and Westmorland were established. Olaf the White and Ívarr made more than one expedition from Ireland to the lowlands of Scotland, and the former was married to Auðr the daughter of Ketill Flatnose who had made himself the greatest chieftain in the Western Islands. After the battle of Hafrsfjord, when Harold Fairhair had finally crushed his rivals in Norway itself, so powerful were the Norse settlements in the West that he felt his position would be insecure until he had received their submission. Accordingly he made a great expedition to the Shetlands, Orkneys and the west coast of Scotland, fulfilled this purpose and entrusted the Northern Islands to Sigurd, brother of Rögnvaldr, earl of Möre, as his vassal.

The history of the Norse settlements in the Orkneys is well and fully told in the *Orkneyingasaga*[10]. The first Orkney-earl was the above-named Sigurd. He entered into an alliance with Thorstein the Red, son to Olaf the White, and together they conquered Caithness and Sutherland, as far south as the river Oikel on the borders of Ross and Cromarty. Sigurd's son Einar, known as Turf-Einar because he first taught the islanders to cut peat for fuel, founded a long line of earls of the Orkneys. He had a[67] quarrel with Harold Fairhair and when that king imposed a fine on the islanders for the murder of his son and the farmers could not pay it, Einar paid it himself on condition that the peasants surrendered their *óðal* rights, i.e. their rights of possession in the lands they cultivated. Turf-Einar's son Sigurd the Stout was the most famous of all the Orkney-earls, renowned both as warrior and poet. He conquered Sutherland, Caithness, Ross, Moray, Argyle, the Hebrides and Man, securing the support of the men of Orkney by giving them back their *óðal*. He married a daughter of Malcolm king of Scotland, and met his end, as we have already seen, fighting on the side of the heathen Norsemen in the battle of Clontarf in 1014. After this the power of the Orkney-earls declined. The Norse line of earls was replaced by one of Scottish descent in 1231, but the islands did not pass definitely to the Scottish crown until the 15th century[11].

Of the Norse settlements in the Hebrides we have no such definite or continuous record. Mention is made in Irish annals of the middle of the 9th century of a king in the Hebrides—one Guðröðr son of Fergus—whose very name shows him to have been one of the Gaill-Gaedhil. Ketill Finn (*v. supra*,[68] p. 56) was another such. In the latter half of the 9th century Ketill Flatnose was the chief Norse leader in the Hebrides until his power was destroyed by Harold Fairhair. Many of the settlers then betook themselves to Iceland, the most famous of them being Auðr the deep-thoughted, widow of Olaf the White and daughter of Ketill. Norse rule was all powerful during the 10th and 11th centuries. There was a line of kings but we find ruling side by side with them certain officers known as 'lawmen' (*v. infra*, p. 103), while in the

late 10th and for the greater part of the 11th century, the Hebrides were under the sovereignty of the Orkney-earls. Norse rule in the Hebrides did not finally come to an end until 1266 when Magnus Hákonsson, king of Norway, renounced all claims to the islands.

The early history of the settlements in Man is equally obscure. At first the island suffered from repeated raids, then about the middle of the 9th century it passed under the authority of the kings of Dublin and remained so until, with the Hebrides and Western Scotland generally, it was conquered by Sigurd the Orkney-earl. From the Orkney-earls it passed to the great conqueror Godred Crovan—the King Gorry or Orry of Manx tradition—who came from the Hebrides, and his successors down to the cession of the islands in 1266 were known as kings of Man and the Isles.

[69]

Of the details of the settlement of the Scottish mainland, of Caithness, Sutherland, and Galloway, of the occupation of Cumberland and Westmorland we know almost nothing, but when we speak later of Norse influence in these districts we shall realise how strong was their hold on them. Our knowledge of the Norse occupation of Man and the Islands is somewhat scanty in detail, but there can be no question that their settlements in lands often closely resembling in physical features their own home-country were of the highest importance.

FOOTNOTES:

[11] They were pledged by Christian I of Denmark and Norway for the payment of the dowry of his daughter Margaret to James III in 1460 and the pledge was never redeemed.

CHAPTER VII THE VIKINGS IN BALTIC LANDS AND RUSSIA

The activities of the Northmen during the Viking age were not confined to the lands west and south of their original homes: the Baltic was as familiar to them as the North Sea, to go 'east-viking' was almost as common as to go 'west-viking' and Scandinavian settlements were founded on the shores of the Baltic and far inland along the great waterways leading into the heart of Russia. As was to be expected from their geographical position it was Danes and Swedes rather than Norwegians who were active in Baltic lands, the Danes settling chiefly on [70] the Pomeranian coast among the Wends, while the Swedes occupied lands further east and founded the Scandinavian kingdom of Russia.

Already in the early years of the 9th century we find the Danish king Guðröðr now making war against his Slavonic neighbours in Mecklenburg-Schwerin, now intriguing with them against the emperor. Mention is made of more than one town on the southern coast of the Baltic bearing an essentially Scandinavian name, pointing to the existence of extensive settlements. Interesting evidence of this eastward movement is also to be found in the *Life of St Anskar*. There we learn how, soon after 830, a Danish fleet captured a city in the land of the Slavs, with great riches, and we hear in 853 how the Swedes were endeavouring to reconquer Kurland which had been under their rule, but had now thrown off the yoke and fallen a prey to a fleet of Danish Vikings—possibly the one just mentioned. St Anskar himself undertook the education of many Wendish youths who had been entrusted to him.

This and other evidence prepare us for the establishment, in the tenth century, of the most characteristic of all Viking settlements, that of Jónsborg on the Island of Wollin at the mouth of the Oder. According to tradition King Gorm the Old conquered a great kingdom in Wendland,[71] but it was to his son Harold Bluetooth that the definite foundation of Jónsborg was ascribed. For many years there had been an important trading centre at Julin on the Island of Wollin, where traders from Scandinavia, Saxony, Russia and many other lands met together to take part in the rich trade between north and south, east and west, which passed through Julin, standing as it did on one of the great waterways of central Europe. Large finds of Byzantine and Arabic coins bear witness to the extensive trade with Greece and the Orient which passed through Julin, while the Silberberg, on which Jónsborg once stood, is so called from the number of silver coins from Frisia, Lorraine, Bavaria and England which have been found there. It was no doubt in the hope of securing some fuller share in this trade that Harold established the great fortress of Jónsborg and entrusted its defence to a warrior-community on whom he imposed the strictest rules of organisation. The story of the founding of Jónsborg is told in the late and untrustworthy *Jónsvikingasaga*, but, while we must reject many of the details there set forth, it is probable that the rules of the settlement as given there are based on a genuine tradition, and they give us a vivid picture of life in a Viking warrior-community. No one under eighteen or over fifty years of age was admitted to their fellowship, and neither birth nor[72] friendship, only personal bravery, could qualify a man for admission. No one was allowed to continue a member who uttered words of fear, or who fled before one who was his equal in arms and strength. Every member was bound to avenge a fallen companion as if he were his brother. No women were allowed within the community, and no one was to be absent for more than three days without permission. All news was to be told in the first instance to their leader and all plunder was to be shared at a common stake. The harbour of Jónsborg could shelter a fleet of 300 vessels and was protected by a mole with twelve iron gates.

The Jónsvikings played an important if stormy part in the affairs of the three Scandinavian kingdoms in the later years of the 10th and the early 11th century. Many of them came to England in the train of king Svein, while Jarl Thorkell was for a time in the service of Ethelred

the Unready. The decline of Jómsborg as a Viking stronghold dates from its devastation by Magnus the Good in 1043, but the importance of Julin as a trading centre continued unimpaired for many years to come.

From Jómsborg Harold Bluetooth's son Hákon made an attack on Samland in the extreme east of Prussia, but the real exploitation of the Eastern Baltic fell as was natural to the Swedes rather than to the Danes. We have already mentioned their[73] presence in Kurland on the Gulf of Riga, and we learn from Swedish runic inscriptions of expeditions to Samland, to the Semgalli (in Kurland) and to the river Duna. The important fortified port of Seeburg was probably near to Riga, while the chief trade route from the island of Gothland lay round cape Domesnæes (note the Scandinavian name) to the mouth of the Duna.

The chief work of the Swedes was however to be done in lands yet further south, in the heart of the modern empire of Russia in Europe.

The story of the founding of the Russian kingdom is preserved to us in the late 10th century chronicle of the monk Nestor, who tells us that in the year 859 'Varangians' came over the sea and took tribute from various Finnish, Tatar and Slavonic peoples inhabiting the forest regions round Lake Ilmen, between Lake Ladoga and the upper waters of the Dnieper. Again he tells us that in 862 the Varangians were driven over seas and tribute was refused, but soon the tribes quarrelled among themselves and some suggested that they should find a prince who might rule over them and keep the peace. So they sent across the sea to the Varangians, to the 'Rus,' for such is the name of these Varangians, just as others are called Swedes, Northmen, Anglians, Goths, saying that their land was great and powerful but there was no order within it and asking them to[74] come and rule over them. Three brothers with their followers were chosen: the eldest, Rurik (O.N. Hrœrekr), settled in Novgorod, the second in Bieloözero, the third in Truvor in Izborsk. Three years later two of the brothers died and Rurik took control of the whole of the settlements, dividing the land among his men. In the same year two of Rurik's followers, Askold (O.N. Höskuldr) and Dir (O.N. Dýri), setting out for Constantinople, halted at Kiev and there founded a kingdom, which in 882 was conquered by Rurik's successor Oleg (O.N. Helgi) and, as the mother of all Russian cities, became the capital of the Russian kingdom.

There is a certain *naïveté* about this story which is characteristic of the monkish chronicler generally, and it is clear that, after the usual manner of the annalist who is compiling his record long after the events described, Nestor has grouped together under one or two dates events which were spread over several years, but the substantial truth of the narrative cannot be impugned and receives abundant confirmation from various sources.

The earliest evidence for the presence of these 'Rus' in Eastern Europe is found in the story of the Byzantine embassy to the emperor Lewis the Pious in 839 (*v. supra*, p. 19), when certain people called 'Rhôs,' who had been on a visit to Constantinople, came in the train of the embassy and asked leave to return[75] home through the empire. Enquiries were made

and it was found that these 'Rhôs' were Swedes. This would point to the presence of 'Rus' in Russia at a date earlier than that given by Nestor, and indeed the rapid extension of their influence indicates a period of activity considerably longer than that allowed by him. These 'Rus' or 'Rhôs' soon came into relations, both of trade and war, with the Byzantine empire. We have preserved to us from the years 911 and 944 commercial treaties made between the 'Rus' and the Greeks showing that they brought all kinds of furs and also slaves to Constantinople, receiving in exchange various articles of luxury including gold and silver ornaments, silks and other rich stuffs. The names of the signatories to these treaties are, on the side of the 'Rus,' almost entirely of Scandinavian origin and may to some extent be shown to be of definitely Swedish provenance. About the year 950, the emperor Constantine Porphyrogenitus, writing a tractate on the administration of the empire, describes how traders from various parts of Russia assemble at Kiev and sail down the Dnieper on their way to Constantinople. Their course down the Dnieper was impeded by a series of rapids, and Constantine gives their names both in 'Russian' and in Slavonic form, and though the names are extremely corrupt in their Greek transcription there is no mistaking that[76] the 'Russian' names are really forms belonging to some Scandinavian dialect.

The Rus were also well known as warriors and raiders. In 865 they sailed down the Dnieper, across the Black Sea and made their way into the Sea of Marmora. Their fleet was dispersed by a storm, but they were more successful in 907 when Oleg with some 2000 ships harried the environs of Constantinople and was bought off by a heavy tribute. These attacks were continued at intervals during the next century.

We also find a good deal of interesting information about these 'Rûs,' as they are called, in various Arab historians. We hear how they sailed their vessels down the chief waterways and had such a firm hold on the Black Sea that by the year 900 it was already known as the Russian Sea. Often they dragged their vessels overland from one stream to another, and thus they made their way from the upper waters of the Don down the Volga to the Caspian Sea. But not only do we have a description of their journeyings we also learn a good deal of their customs and habits, and, though at times the information given is open to suspicion, archaeological research tends to confirm the statements of these historians and to show that the civilisation of the 'Rûs' closely resembled that of the Scandinavian peoples generally in the Viking age.

[77]

The identification of the ancient 'Rus' with the Swedes was long and hotly contested by Slavonic patriots but there is now a general consensus of opinion that the evidence for it is too strong to be overthrown. Not only have we the evidence given above but also the very names 'Rus' and 'Varangian' can be satisfactorily explained only on this theory. The name 'Rus' is the Slavonic, 'Rhôs' the Greek, and 'Rûs' the Arabic form of the Finnish name for Sweden, viz. Ruotsi. This name was originally derived from *Ropr* or *Ropin*, the name of certain districts of Upland and Östergötland, whose inhabitants were known as *Rods-karlar*

or *Rods-mæn*. The Finns had early come into relation with the Swedes and they used the name of those people with whom they were in earliest and most intimate contact for the whole Swedish nationality. When these Swedes settled in Russia the Finns applied the same term to the new colonists and the term came to be adopted later into the various Slavonic dialects.

We are most familiar with the term 'Varangian' or 'Variag,' to use the Slavonic form, as applied to the famous guard of the Byzantine emperors, which seems to have been formed in the latter half of the 10th century and was largely composed of Norwegian, Icelandic and Swedish recruits. In Russian and Arabic historians on the other hand the term is used rather in an ethnographic or geographic sense.[78] We have seen that it was thus used by Nestor, and similarly we find the Baltic commonly spoken of as the 'Varangian' Sea both in Russian and in Arabic records. All the evidence tends to show that this was the earlier sense of the term and we find it gradually displacing the term 'Rhôs' even in Byzantine historians. The word itself is of Scandinavian origin and means 'those who are bound together by a pledge.' The theory which best explains its various uses is that put forward by Dr Vilhelm Thomsen, viz. that it originated among the Northmen who settled in Russia, i.e. among the ancient Russ, and that under that term they denoted those peoples west of the Baltic who were related to them by nationality.

From the Russ the word passed into the Slavonic language as *variag*[12], into the Greek as *barangoi*—where it was often used in the restricted sense of members of the imperial guard largely recruited from this nation,—and into the Arabic as *varank*. Dr Thomsen adduces two happy parallels for the somewhat remarkable history of the terms 'Russian' and 'Varangian.' The term 'Russian' came to be used as their own name by the Slavonic peoples, who were once ruled over by the Russ, in much the same way that the term 'Frankish' or 'French' was adopted by the Gaulish population of France from[79] its Germanic conquerors. The term 'Varangian,' ultimately the name for a nation or group of nations, came to be used of a military force once largely recruited from those nations, much in the same way as the term 'Swiss' was applied to the Papal guard long after that guard had ceased to be recruited from the Swiss nation exclusively.

The belief in the Scandinavian origin of the Russ is amply supported by archaeological evidence. The large number of Arabic coins found in Sweden (more especially in Gothland) and in Russia itself points to an extensive trade with the Orient whose route lay chiefly to the east of the Caspian Sea and then along the valley of the Volga. The dates of the coins point to the years between 850 and 1000 as those of most active intercourse with the East. Equally interesting is the large number of western coins, more especially Anglo-Saxon pennies and sceatts, which have been found in Russia. They probably represent portions of our Danegeld which had come into the hands of the Swedes either in trade or war. Viking brooches of the characteristic oval shape with the familiar zoomorphic ornamentation have been found in Western Russia, and one stone with a runic inscription, belonging to the 11th

century and showing evidence of connexion with Gothland, has been found in a burial mound in Berezan, an island at the mouth of the Dnieper.[80] Professor Braun says that no others have been found because of the rarity of suitable stone.

How long the Russ maintained their distinctively Scandinavian nationality it is difficult to determine. Oleg's grandson Svjatoslav bore a distinctively Slavonic name, and henceforward the names of the members of the royal house are uniformly Slavonic, but the connexion with Sweden was by no means forgotten. Svjatoslav's son Vladimir the Great secured himself in the rulership of Novgorod in 980 by the aid of *variags* from over the sea and established a band of variag warriors in his chief city of Kiev. But the Viking age was drawing to a close. Variag auxiliaries are mentioned for the last time in 1043 and it is probable that by the middle of the 11th century the Scandinavian settlers had been almost completely Slavonicised. Of their permanent influence on the Russian people and on Russian institutions it is, in the present state of our knowledge, almost impossible to speak. Attempts have been made to distinguish Scandinavian elements in the old Russian law and language but with no very definite results, and we must content ourselves with the knowledge that the Vikings were all powerful in Western and Southern Russia during the greater part of two centuries, carrying on an extensive trade with the East, establishing Novgorod, 'the new town,' on the Volga under the name *Holmgarðr* and founding a dynasty[81] which ruled in Kiev and became a considerable power in eastern Europe negotiating on terms of equality with the Byzantine emperors.

Mention has already been made more than once of the way in which the Northmen entered the service of the emperors at Constantinople or *Miklagarðr*, 'the great city,' as they called it. From here they visited all parts of the Mediterranean. When Harold Hardrada was in the service of the emperor he sailed through the Grecian archipelago to Sicily and Africa. There he stayed several years, conquering some eighty cities for his master and gaining rich treasures for himself. One interesting memorial of these journeys still remains to us. At the entrance to the arsenal in Venice stands a marble lion brought from Athens in 1687. Formerly it stood at the harbour of the Piraeus, known thence as the Porto Leone. On the sides of the lion are carved two long runic inscriptions arranged in snake-like bands. The runes are too much worn to be deciphered but they are unquestionably of Scandinavian origin and the snake-bands closely resemble those that may be seen on certain runic stones in Sweden. The carving was probably done by Swedes from Uppland about the middle of the 10th century. One can hardly imagine a more striking illustration of the extent and importance of the Viking movement in Europe.

FOOTNOTE:

[12] The word *variag* in Modern Russian means a pedlar and bears witness to the strong commercial instincts of the Viking.

[82]

CHAPTER VIII VIKING CIVILISATION

The activities of the Vikings were all-embracing, and before any attempt can be made to estimate their influence in the various countries which came permanently under their rule, or were brought more or less closely into touch with them, some account, however slight, must be given of Scandinavian civilisation at this time, both on its spiritual and on its material sides. For the former aspect we must turn chiefly to the poems and sagas of old Norse literature, for the latter to the results of modern archaeological research. So far as the poems and sagas are concerned it is well to remember that they were to a large extent composed in Iceland and reflect the somewhat peculiar type of civilisation developed there at a period just subsequent to the Viking age itself. This civilisation differs necessarily from that developed in Scandinavia or in the other Scandinavian settlements, in that it was free from Western influence, but this is to some extent compensated for by the fact that we get in Iceland a better picture of the inherent possibilities of Viking civilisation when developed on independent lines.

[83]

At the beginning of the Viking age the Scandinavian peoples were in a transitional stage of development; on the one hand there was still much, both in their theory and in their practice of life, that savoured of primitive barbarism, while on the other, in the development of certain phases of human activity, more especially in those of war, trade, and social organisation, they were considerably ahead of many of their European neighbours. More than one writer has commented upon the strange blending of barbarism and culture which constitutes Viking civilisation: it is evident when we study their daily life, and it is emphasised in the story of their slow and halting passage from heathenism to Christianity.

We need not travel far to find examples of their barbarism. Their cruelty in warfare is a commonplace among the historians of the period. When the Irish found the Danes cooking their food on spits stuck in the bodies of their fallen foes (*v. supra*, p. 55) and asked why they did anything so hateful, the answer came 'Why not? If the other side had been victorious they would have done the same with us.' The custom of cutting the blood-eagle (i.e. cutting the ribs in the shape of an eagle and pulling the lungs through the opening) was a well-known form of vengeance taken on the slayer of one's father if captured in battle, and is illustrated in the story^[84] of the sons of Ragnarr Loðbrók himself. Another survival of primitive life was the famous Berserk fury, when men in the heat of battle were seized with sudden madness and, according to the popular belief, received a double portion of strength, and lost all sense of bodily pain, a custom for which Dr Bugge finds an apt parallel in the 'running amok' of the races of the Malay peninsula. Children were tossed on the point of the spear and the Viking leader who discouraged the custom was nicknamed *barnakarl*, i.e. children's friend.

In contrast to these methods of warfare stands their skill in fortification, in which they taught many lessons both to their English and to their Frankish adversaries, their readiness in adapting themselves to new conditions of warfare (*v. supra*, p. 46), and their clever strategy, whereby they again and again outwitted their opponents.

The same contrast meets us when we consider the position of women among them. The chroniclers make many references to their lust after women. We hear in an English chronicler how they combed their hair, indulged in sabbath baths, often changed their clothes and in various ways cultivated bodily beauty 'in order that they might the more readily overcome the chastity of the matrons, and make concubines even of the daughters of the nobility.'

Wandering from country to country they often had[85] wives in each, and polygamy would seem to have been the rule, at least among the leaders. In Ireland we hear of what seem to have been veritable harems, while in Russia we are told of the great grandson of Rurik, the founder of the Russian kingdom, that he had more than 800 concubines, though we may perhaps suspect the influence of Oriental custom in this case. Yet, side by side with all this, the legitimate wife was esteemed and honoured, and attained a position and took a part in national life which was quite unusual in those days. In the account of an Arabic embassy to the Vikings of the west (*v. supra*, p. 20) we have a vivid picture of the freedom of their married life. Auðr, the widow of Olaf the White, after the fall of her son Thorstein, took charge of the fortunes of her family and is one of the figures that stand out most clearly in the early settlement of Iceland. We have only to turn to the Icelandic sagas to see before us a whole gallery of portraits, dark and fair alike, of women cast in heroic mould, while the stone at Dyrna in Hadeland, bearing the runic inscription, 'Gunvor, daughter of Thirek, built a bridge to commemorate her daughter Astrid, she was the most gracious maiden in Hadeland,' gives us one of the most attractive pictures of womanhood left to us from the Viking age. It must be added however that beside the runic inscription, the stone bears carvings of the[86] Christ-child, the star in the east and the three kings, and this may serve to remind us that the age was one in which the peoples of the North passed from heathenism to Christianity, though the passage was a slow one and by no means complete even at the close of the period.

It is probable that the first real knowledge of 'the white Christ' came, as is so often the case, with the extension of trade—Frisians trading with Scandinavia, and Danes and Swedes settling in Frisia and elsewhere for the same purpose. St Willibrord at the beginning of the 8th century and Archbishop Ebbo of Rheims in 823, as papal legate among the northern peoples, undertook missions to Denmark, but it was in 826, when king Harold was baptised at Mainz, that the first real opportunity came for the preaching of Christianity in Denmark. Harold was accompanied on his return by St Anskar, a monk from Corvey and a man filled with religious zeal. After two years' mission in Denmark St Anskar sailed to Sweden, where he was graciously received at Björkö by king Björn. He made many converts and on his return home in 831 was made archbishop of Hamburg and given, jointly with Ebbo, jurisdiction over the whole of the northern realms. Hamburg was devastated in 845 and St Anskar was then appointed to the bishopric of Bremen, afterwards united to a restored

archbishopric of Hamburg. He^[87] laboured in Denmark once more and established churches at Slesvík and Ribe. He conducted a second mission to Sweden and his missionary zeal remained unabated until his death in 865; his work was carried on by his successor and biographer St Rimbart and by many others. Their preaching was however confined to Jutland and South Sweden and there is no evidence of any popular movement towards Christianity. Gorm the Old was a steadfast pagan but Gorm's son Harold Bluetooth was a zealous promoter of Christianity. His enthusiasm may have been exaggerated by monastic chroniclers in contrast to the heathenism of his son Svein, but with the accession of Cnut all fears of a reversion to heathendom were at an end. Cnut was a devout son of the Church.

The first Danish settlers in England were entirely heathen in sentiment, but they were soon brought into close contact with Christianity, and the terms of the peace of Edward and Guthrum in the early years of the 10th century show that already Christianity was making its way in the Danelagh. In the course of this century both archbishoprics were held by men of Danish descent and the excesses of the early 11th century were due, not to the Danish settlers, but to the heathen followers of Olaf Tryggvason and Svein Forkbeard. Similarly the Danish settlers in Normandy were within a few^[88] years numbered among the Church's most enthusiastic supporters, and Rollo's own son and successor William was anxious to become a monk.

The story of the preaching of Christianity in Norway is a chequered one. The first attempt to establish the Christian faith was made by Hákon Aðalsteinsfóstri (*v. supra*, p. 36). Baptised and educated in England, he began warily, inducing those who were best beloved by him to become Christians, but he soon came into conflict with the more ardent followers of paganism. At the great autumn festival at Lade when the cups of memory were drunk, Earl Sigurd signed a cup to Odin, but the king made the sign of the cross over his cup. Earl Sigurd pacified popular clamour by saying that the king had made the sign of the hammer and consecrated the cup to Thor. The next day the king would not eat the horse-flesh used in their offerings nor drink the blood from it: the people were angry and the king compromised by inhaling the steam from the offering through a linen cloth placed over the sacrificial kettle, but no one was satisfied and at the next winter-feast the king had to eat some bits of horse-liver and to drink crossless all the cups of memory. Hákon died a Christian but Eyvindr Skaldaspillir in *Hákonarmál* describes how he was welcomed by Odin to Valhalla.

Earl Hákon Sigurdson, nicknamed *blót-jarl*, i.e.^[89] sacrifice-earl, was a zealous heathen, but Olaf Tryggvason after his succession in 995 promoted the cause of Christianity by every means in his power, and it was largely to this that he owed his ultimate overthrow. Then, after a brief interval, the crown passed to St Olaf, greatest of all Christian champions in Norway, and during his reign that country became definitely Christian, though his rough and ready methods of conversion were hardly likely to secure anything but a purely formal and outward adhesion to the new faith.

Sweden was the most reluctant of the three northern realms to accept Christianity, and the country remained almost entirely heathen until the close of the Viking period.

The story of the Norse settlers in Ireland and the Western Islands in their relation to Christianity was very much that of the Danes in England. Celtic Christianity had a firm hold in these countries, and from the earliest period of the settlements many of the Vikings adopted the Christian faith. Among the settlers in Iceland who came from the West were many Christians, and Auðr herself gave orders at her death that she should be buried on the sea-shore below the tide-mark, rather than lie in unhallowed ground. Most of the settlers undoubtedly remained heathen—in 996 a ring sacred to Thor was taken from a temple in Dublin and in 1000 king Brian^[90] destroyed a grove sacred to the same god just north of the city. But side by side with incidents of this kind must be placed others like that of the sparing of the churches, hospitals and almshouses when Armagh was sacked in 921, or the retirement of Anlaf Cuaran to the monastery at Iona in 981. In Ireland as elsewhere there seems to have been a recrudescence of heathenism in the early years of the 11th century and the great fight at Clontarf was regarded as a struggle between pagan and Christian.

Outwardly the Scandinavian world had largely declared its adhesion to Christianity by the close of the Viking period, but we must remember that the medieval Church was satisfied if her converts passed through the ceremony of baptism and observed her rites, though their sentiments often remained heathen. Except in purely formal fashion it is impossible to draw a definite line of demarcation between Christian and heathen, and the acceptance of Christianity is of importance not so much from any change of outlook which it produced in individuals, as because it brought the peoples of the North into closer touch with the general life and culture of medieval Europe. Leaders freely accepted baptism—often more than once—and even confirmation as part of a diplomatic bargain, while their profession of Christianity made no difference to their^[91] Viking way of life. Even on formal lines the Church had to admit of compromise, as for example in the practice of *prime-signing*, whereby when Vikings visited Christian lands as traders, or entered the service of Christian kings for payment, they often allowed themselves to be signed with the cross, which secured their admission to intercourse with Christian communities, but left them free to hold the faith which pleased them best.

Strange forms and mixtures of belief arose in the passage from one faith to the other. Helgi the Lean was a Christian, but called on Thor in the hour of need. The Christian saints with their wonder-working powers were readily adopted into the Norse Pantheon, and Vikings by their prayers and offerings secured the help of St Patrick in Ireland and of St Germanus in France in times of defeat and pestilence, while we hear of a family of settlers in Iceland who gave up all faith except a belief in the power of St Columba. On sculptured stones in the west may be found pictures of Ragnarök, of Balder and of Loki together with the sign of the cross. Some of the heathen myths themselves show Christian influence; the Balder story with its echoes of the lamentations for the suffering Christ belongs to the last stage of Norse heathendom, while a heathen skald makes Christ sit by the Fountain of Fate as the mighty

destroyer of the giants. When[92] the virtue had gone out of their old beliefs many fell a prey to the grossest superstition, worshipping the rocks and groves and rivers once thought to be the dwelling place of the gods. Others renounced faith in Christian and heathen gods alike, and the nickname 'godless' is by no means rare among the settlers in Iceland. Of such it is often said that they believed in themselves, or had no faith in aught except their own strength and power, while in the saga of Friþjof we hear how the hero paid little heed to the sanctity of the temple of Balder and that the love of Ingibjorg meant more to him than the wrath of the gods. For a parallel to such audacious scepticism as that of Friþjof we must turn to southern lands and later times with Aucassin's 'In Paradise what have I to win? Therein I seek not to enter, but only to have my Nicolete, my sweet lady that I love so well.' For some the way of escape came not by superstition or by scepticism, but in mystic speculation, in pure worship of the powers of nature. Thus we hear of the Icelander Thorkell Mani, whom all praised for the excellence of his way of life, that in his last illness he was carried out into the sunshine, so that he might commend himself into the hands of the god who made the sun, or of the *goði* Askell who, even in the hour of famine, deemed it was more fitting to honour the creator by caring for the aged and the children,[93] than to relieve distress by putting these helpless ones to death.

One other illustration of the declining force of heathenism must be mentioned. It is to the Viking age that we owe the poems of the older Edda, that storehouse of Norse mythology and cosmogony. They are almost purely heathen in sentiment, and yet one feels that it could only be in an age when belief in the old gods was passing away that the authors of these poems could have struck those notes of detachment, irony, and even of burlesque, which characterise so many of them.

The condition of faith and belief in the Viking age was, then, chaotic, but, fortunately for purposes of clear statement, there was, to the Norse mind at least, no necessary connexion between beliefs and morality, between faith and conduct, and the ideas on which they based their philosophy and practice of life are fairly distinct.

The central ideas which dominate the Norse view of life are an ever-present sense of the passingness of all things and a deep consciousness of the over-ruling power of Fate. All earthly things are transitory and the one thing which lasts is good fame. 'Wealth dies, kinsmen die, man himself must die, but the fame which a man wins rightly for himself never dies; one thing I know that never dies, the judgment passed on every man that dies,'[94] says the poet of the *Hávamál*, the great storehouse of the gnomic wisdom of the Norsemen. 'All things are unstable and transitory, let no man therefore be arrogant or over-confident. The wise man will never praise the day before it is evening.' Prudence and foresight are ever necessary. All things are determined by a fate which is irrevocable and cannot be avoided. Every man must die the death that is appointed for him, and the man whose final day has not yet come may face unmoved the greatest danger. This sense of an inevitable fate must lead to no weakening of character or weariness of life. Death must be faced with cheerful stoicism and our judgment of the worth of any man must depend on the way in which he awaits the

decree of fate. Place no great trust in others whether friend or foe, least of all place trust in women. 'Wommennes conseils been ful ofte colde,' says Chaucer in the *Nun's Priest's Tale*, using an old Scandinavian proverb. 'Be friendly to your friends and a foeman to your foes. Practice hospitality and hate lying and untruthfulness.' With their enemies the Vikings had an evil reputation for cunning and deceit, but when we study the incidents on which this charge was based—as for example the story of the capture of Luna (*v. supra*, p. 47) or the oft-repeated trick of feigning flight, only to lure the enemy away from safe ground—one must confess that they show an[95] enemy outwitted rather than deceived. This aspect of Viking character perhaps finds its best illustration in the figure of Odin. His common epithets are 'the wise,' 'the prudent,' 'the sagacious'; he is a god of witchcraft and knows all the secret powers of nature and stands in contrast to the simple-minded Thor, endowed with mighty strength, but less polished and refined. The development of the worship of Odin in Norway belongs specially to the later Iron Age, and it is worthy of note that his worship seems to have prevailed chiefly in military circles, among princes and their retainers.

The Vikings were guilty of two besetting sins—immoderate love of wine and of women. Of their relations to women enough has been said already. Their drunken revelry is best illustrated by the story of the orgie which led up to the death of St Alphege in London in 1012, when, after drinking their fill of the wine they had brought from abroad, they pelted the bishop with bones from the feast, and finally pierced his skull with the spike on the back of an axe. Of sin in the Christian sense the Vikings had no conception. An Irish chronicler tells us indeed that the Danes have a certain piety in that they can refrain from flesh and from women for a time, but a truer description is probably that given by Adam of Bremen when he says that the Danes can weep neither for their sins nor for their dead.

[96]

The chief occupations of the Vikings were trade and war, but we must beware of drawing a too rigid distinction between adventurers and peaceful stay-at-homes. The Vikings when they settled in England and elsewhere showed that their previous roving life did not hinder them in the least from settling down as peaceful traders, farmers, or peasant-labourers, while the figure of Ohthere or Óttarr, to give him his Norse name, who entered the service of king Alfred, may serve to remind us that many a landed gentleman was not above carrying on a good trade with the Finns or undertaking voyages of exploration in the White Sea.

Trading in those days was a matter of great difficulty and many risks. The line of division between merchant and Viking was a very thin one, and more than once we read how, when merchants went on a trading expedition, they arranged a truce until their business was concluded and then treated each other as enemies. Trade in Scandinavia was carried on either in fixed centres or in periodical markets held in convenient places. The chief trading centres were the twin towns of Slesvík-Hedeby in Denmark, Skiringssalr in S.W. Norway, and Björkö, Sigtuna and the island of Gothland in Sweden, while an important market was held periodically at Bohuslän on the Götaelv, at a place where the boundaries of the three northern

kingdoms met. A characteristic^[97] incident which happened at this market illustrates the international character of the trade done there. On a certain occasion a wealthy merchant named Gille (the name is Celtic), surnamed the Russian because of his many journeys to that country, set up his booth in the market and received a visit from the Icelander Höskuldr who was anxious to buy a female slave. Gille drew back a curtain dividing off the inner part of the tent and showed Höskuldr twelve female slaves. Höskuldr bought one and she proved to be an Irish king's daughter who had been made captive by Viking raiders.

The chief exports were furs, horses, wool, and fish while the imports consisted chiefly in articles of luxury, whether for clothing or ornament. There was an extensive trade with the Orient in all such luxuries and the Vikings seem eagerly to have accumulated wealth of this kind. When Limerick was re-captured by the Irish in 968, they carried off from the Vikings 'their jewels and their best property, and their saddles beautiful and foreign (probably of Spanish workmanship), their gold and their silver: their beautifully woven cloth of all colours and all kinds: their satins and silken cloths, pleasing and variegated, both scarlet and green, and all sorts of cloth in like manner.' They captured too 'their soft, youthful, bright, matchless girls: their blooming silk-clad young women: and their^[98] active, large, and well formed boys.' Such captives whether made by Irish from Norsemen or Norsemen from Irish would certainly be sold as slaves, for one of the chief branches of trade in those days was the sale as slaves of those made prisoner in war.

The expansion of Scandinavian trade took place side by side with, rather than as a result of, Viking activity in war. There is evidence of the presence of traders in the Low Country early in the 9th century, and already in the days of St Anskar we hear of a Swedish widow of Björkö who left money for her daughter to distribute among the poor of Duurstede. Jónsborg was established to protect and increase Scandinavian trade at Julin, and there were other similar trading centres on the southern and eastern shores of the Baltic.

The Viking might busy himself either with war or trade, but whatever his occupation, living as he did in insular or peninsular lands, good ships and good seamanship were essential to his livelihood. Seamen now often abandoned that timid hugging of the coast, sailing only by day time and in fair weather, which characterised the old Phoenician traders, and boldly sailed across the uncharted main with no help save that of the sun and stars by which to steer their course. It was this boldness of spirit alone which enabled them to reach the lonely Faroes, the distant Shetlands and Orkneys, and the yet more^[99] remote Iceland. Irish monks and anchorites had shown similar fearlessness, but their bravery was often that of the fanatic and the mystic rather than the enterprise of the seaman. Boldness of seamanship led to boldness in exploration. From Iceland the Vikings sailed to Greenland, and by the year 1000 had discovered Vinland, the N.E. part of North America. Ottarr rounded the North Cape and sailed the White Sea in the 9th century, while Harold Hardrada in the 11th century made a voyage of Polar exploration.

Of their ships we know a good deal both from the sagas and from the remains of actual ships preserved to us. The custom of ship-burial, i.e. burial in a ship over which a grave chamber, covered with a how or mound, was erected, was common in the Viking age, and several such ships have been discovered. The two most famous are those of Gokstad and Oseberg, both found on the shores of Christiania Fjord. The Gokstad vessel is of oak, clinker-built, with seats for sixteen pairs of rowers, and is 28 ft. long and 16 ft. broad amidships. It dates from about 900, and in form and workmanship is not surpassed by modern vessels of a similar kind. There is a mast for a single sail, and the rudder, as always in those days, is on the starboard side. The gunwale was decorated with a series of shields painted alternately black and gold. The appearance of the vessel when fully[100] equipped can perhaps best be judged from the pictures of Viking ships to be seen in the Bayeux tapestry. There we may note the parti-coloured sail with its variegated stripes, and the rich carving of stem and stern. These magnificent sails were a source of much pride to their possessors, and the story is told of Sigurd Jerusalem-farer that on his way home from Jerusalem to Constantinople he lay for half-a-month off Cape Malea, waiting for a side wind, so that his sails might be set lengthwise along the ship and so be better seen by those standing on shore as he sailed up to Constantinople. The stem often ended in a dragon's head done over with gold, whilst the stern was frequently shaped like a dragon's tail, so that the vessel itself was often called a dragon.

The Oseberg ship is of a different type. The gunwale is lower and the whole vessel is flatter and broader. It is used as the grave-chamber of a woman, and the whole appearance of the vessel, including its richly carved stem, indicates that it was used in calm waters for peaceful purposes.

The story of the escape of Hárek of Thjotta through Copenhagen Sound after the battle of Helgeää in 1018 illustrates the difference between a trading-ship and a ship of war. Hárek struck sail and mast, took down the vane, stretched a grey tent-cloth over the ship's sides, and left only a few rowers fore and aft. The rest of the crew were bidden lie flat so that they might not be seen, with the result that the Danes mistook Hárek's war-galley for a trading-vessel laden with herrings or salt and let it pass unchallenged.

PLATE I

Viking ship from the Bayeux Tapestry

[101]

In the last years of the Viking period ships increased greatly both in size and number. Olaf Tryggvason's vessel, the *Long Serpent*, in which he fought his last fight at Svoldr, had thirty benches of oars, while Cnut the Great had one with sixty pairs of oars. This same king went with a fleet of some fourteen hundred vessels to the conquest of Norway.

In battle the weapons of defence were helmet, corselet and shield. The shields were of wood with a heavy iron boss in the centre. The corselets were made of iron rings, leather, or thick cloth. The weapons of offence were mainly sword, spear and battle-axe. The sword was of the two-edged type and usually had a shallow depression along the middle of the blade, known as the blood-channel. Above, the blade terminated in a narrow tang, bounded at either end by the hilts. Round the tang and between the hilts was the handle of wood, horn, or some similar material, often covered with leather, or occasionally with metal. Above the upper hilt was a knob, which gave the sword the necessary balance for a good steady blow. Generally the knob and the hilts were inlaid with silver, bronze, or copper-work. The battle-axe, the most characteristic [102] of Viking weapons, was of the heavy broad-bladed type.

Next to warfare and trade, the chief occupation of the Viking was farming, while his chief amusement was the chase. At home the Viking leader lived the life of an active country gentleman. His favourite sport was hawking, and one of the legendary lives of St Edmund tells how Ragnarr Loðbrók himself was driven by stress of storm to land on the East Anglian coast, receiving a hospitable welcome from the king, but ultimately meeting death at the hands of the king's huntsman who was jealous of his prowess as a fowler.

Of the social organisation of the Vikings it is impossible to form a very definite or precise picture. We have in the laws of the Jónsborg settlement (*v. supra*, p. 71) the rule of life of a warrior-community, but it would be a mistake to imagine that these laws prevailed in all settlements alike. The general structure of their society was aristocratic rather than democratic, but within the aristocracy, which was primarily a military one, the principle of equality prevailed. When asked who was their lord, Rollo's men answered 'We have no lord, we are all equal.' But while they admitted no lord, the Vikings were essentially practical; they realised the importance of organised leadership, and we have a succession of able leaders mentioned in the annals^[103] of the time, to some of whom the title king was given. These kings however are too numerous, and too many of them are mentioned together, for it to be possible to give the term king in this connexion anything like its usual connotation. It would seem rather to have been used for any prince of the royal house, and it was only when the Vikings had formed fixed settlements and come definitely under Western influence that we hear of kings in the ordinary territorial sense—kings of Northumbria, Dublin, Man and the Isles, or East Anglia. We hear also of *jarls* or earls, either as Viking leaders or as definite territorial rulers, as for example the Orkney-earls and more than one earl who is mentioned as ruling in Dublin, but these earls usually held their lands under the authority of a king. By the side of kings and earls mention is made both in the Danelagh and also in the Western Islands of *lawmen*. It is difficult exactly to define their position and function. Originally these men were simply experts in the law who expounded it in the popular *thing* or assembly, and were the spokesmen of the people as against the king and the court, but sometimes they assumed judicial functions, acting for example in Sweden as assessors to the king, who was supreme judge.

In their home life we find the same strange mixture of civilisation and barbarism which marks them elsewhere. Their houses were built of timber,^[104] covered with clay. There was no proper hearth and the smoke from the fire made its way out as best it could through the turf-covered roof. The chief furniture of the room consisted in beds, benches, long tables and chests, and in the houses of the rich these would at the close of our period often be carved with stories from the old heroic or mythologic legends, while the walls might be covered with tapestry. Prominent in the chieftain's hall stood the carved pillars which supported his high-seat and were considered sacred. When some of the settlers first sailed to Iceland they threw overboard their high-seat pillars which they had brought with them, and chose as the site of their new abode the place where these pillars were cast ashore.

In clothing and adornment there can be no question that our Viking forefathers had attained a high standard of luxury. Any visitor to the great national museums at Copenhagen, Stockholm or Christiania must be impressed by the wealth of personal ornaments displayed before him: magnificent brooches of silver and bronze, arm-rings and neck-rings of gold and silver, large beads of silver, glass, rock-crystal, amber and cornelian. At one time it was commonly assumed that these ornaments, often displaying the highest artistic skill, were simply plunder taken by the Vikings from nations more cultured and artistic than themselves, but patient investigation has shown that the majority of them were wrought in Scandinavia itself.

PLATE II

Ornaments of the Viking period

[105]

The most characteristic of Viking ornaments is undoubtedly the brooch. It was usually oval in shape and the concave surface was covered with a framework of knobs and connecting bands, which divided it into a series of 'fields' (to use a heraldic term), which could themselves be decorated with the characteristic ornamentation of the period. The commonest form of oval brooch was that with nine knobs on a single plate, but in the later examples the plate is often doubled. The brooches themselves were of bronze, the knobs usually of silver with silver wire along the edge of the brooch. These knobs have now often disappeared and the bronze has become dull with verdigris, so that it is difficult to form an idea of their original magnificence. The oval brooches were used to fasten the outer mantle and were usually worn in pairs, either on the breast or on the shoulders, and examples of them have been found from Russia in the East to Ireland on the West. Other types of brooch are also found—straight-armed, trilobed and round. Such brooches were often worn in the middle of the bosom a little below the oval ones. Other ornaments beside brooches are common—arm-rings, neck-rings, pendants. One of the most interesting of the pendants is a ring with a series of small silver Thor's hammers[106] which was probably used as a charm against ill-luck. All these ornaments alike are in silver rather than gold, and it has been said that if the post-Roman period of Scandinavian archaeology be called the age of Gold, the Viking period should be named the age of Silver.

The style of ornamentation used in these articles of personal adornment as well as in objects of more general use, such as horse-trappings, is that commonly known to German archaeologists as *tier-ornamentik*, i.e. animal or zoomorphic ornamentation. This last translation may sound pedantic but it is the most accurate description of the style, for we have no attempt to represent the full form of any animal that ever had actual existence; rather we find the various limbs of animals—heads, legs, tails—woven into one another in fantastic design in order to cover a certain surface-area which requires decoration. 'The animals are ornaments and treated as such. They are stretched and curved, lengthened and shortened, refashioned, and remodelled just as the space which they must fill requires.' This style was once called the 'dragon-style,' but the term is misleading as there is no example belonging to the Viking period proper of any attempt to represent a dragon, i.e. some fantastic animal with wings. Such creatures belong to a later period.

The zoomorphic style did not have its origin[107] during the Viking period. It is based on that of a preceding period in the culture of the North German peoples, but it received certain characteristic developments at this time, more especially under the influence of Irish and Frankish art. Irish art had begun to influence that of Scandinavia even before the Viking period began, and the development of intercourse between North and West greatly strengthened that influence. To Frankish influence were due not only certain developments of *tier-ornamentik* but also the use of figures from the plant-world for decorative purposes. One of the finest brooches preserved to us from this period is of Frankish workmanship—a magnificent trilobed brooch of gold with acanthus-leaf ornamentation. This leaf-work was often imitated by Scandinavian craftsmen but the imitation is usually rude and unconvincing. Traces are also to be found of Oriental and more especially of Arabic influence in certain forms of silver-ornamentation, but finds of articles of actual Eastern manufacture are more common than finds of articles of Scandinavian origin showing Eastern influences in their workmanship.

Buried treasure from the Viking period is very common. It was a popular belief, sanctioned by the express statement of Odin, that a man would enjoy in Valhalla whatsoever he had himself buried in the earth. Another common motive in the burial of[108] treasure was doubtless the desire to find a place of security against robbery and plunder. Treasure thus secreted would often be lost sight of at the owner's death. To the burial-customs of the Viking period also we owe much of our knowledge of their weapons, clothing, ornaments and even of their domestic utensils.

The dead were as a rule cremated, at least during the earlier part of the Viking period. The body burned or unburned was either buried in a mound of earth, forming a 'how,' or was laid under the surface of the ground, and the grave marked by stones arranged in a circle, square, triangle or oval, sometimes even imitating the outlines of a ship. The 'hows' were often of huge size. The largest of the three 'King's hows' at Old Upsala is 30 ft. high and 200 ft. broad. A large how was very necessary in the well-known ship-burial when the dead man (or woman) was placed in a grave-chamber on board his ship and the ship was drawn on land and buried within a how. Men and women alike were buried in full dress, and the men usually have all their weapons with them. In the latter case weapons tend to take the place of articles of domestic use such as are found in the graves of an earlier period, and the change points to a new conception of the future life. It is now a life in which warriors feast with Odin in Valhalla on benches that are[109] covered with corselets. A careful examination of Norwegian graves has proved fairly definitely the existence of the custom of 'suttee' during the Viking period, and the evidence of the Arab historian Ibn Fadhlān seems to show that the same custom prevailed among the Rûs. Horses, dogs, hawks and other animals were often buried with their masters, and the remains of such, burned or unburned, have frequently been found.

The varying customs attending burial are happily illustrated in the two accounts preserved to us of the burial of king Harold Hyldetan, who died c. 750. The accounts were written down long after the actual event, but they probably give us a good picture of familiar incidents in burial ceremonies of the Viking period.

One account (in a late saga) tells how, on the morrow of the great fight at Bravalla, king Ring caused search to be made for the body of his kinsman Harold. When the body was found, it was washed and placed in the chariot which Harold used in the fight. A large mound was raised and the chariot was drawn into the mound by Harold's own horse. The horse was now killed and Ring gave his own saddle to Harold, telling him that he might ride or drive to Valhalla just as it pleased him best. A great memorial feast was held, and Ring bade his warriors and nobles throw into the mound large[110] rings of gold and silver and good weapons before it was finally closed.

The other account (in Saxo) tells how Ring harnessed his own horse to Harold's chariot and bade him drive quickly to Valhalla as the best in battle, and when he came to Odin to prepare goodly quarters for friend and foe alike. The pyre was then kindled and by Ring's command the Danes placed Harold's ship upon it. When the fire destroyed the body, the king commanded his followers to walk round the pyre and chant a lament, making rich offerings of weapons, gold and treasure, so that the fire might mount the higher in honour of the great king. So the body was burned, the ashes were collected, laid in an urn and sent to Leire, there to be buried with the horse and the weapons in royal fashion.

There are many curious coincidences of detail between these accounts and that given by Ibn Fadhlán of the burial of a Rûs warrior, and every detail of them has at one time or another been confirmed by archaeological evidence.

PLATE III

The Jellinge stone

[111]

The dead were commemorated by the how itself, but *bautasteinar*, i.e. memorial stones, were also erected, either on the how or, more commonly, elsewhere. In course of time these monuments came to be inscribed with runes. Usually the inscription is of the most formal type, giving the name of the dead person, the name of the man who raised the memorial, and sometimes also that of the man who carved the runes. Occasionally there is some more human touch as in the wording of the Dyrna runes (*v. supra*, p. 85), and in the latter part of the Viking period we often find pictures and even scenes inscribed on the stones. This is true of the Dyrna stone (*v. supra*, p. 86): the Jellinge stone has a figure of Christ on it, while there is a famous rock-inscription in Sweden representing scenes from the Sigurd-story (Regin's smithy, hammer, tongs and bellows, Sigurd piercing Fafnir with his sword, the birds whose speech Sigurd understood) encircled by a serpent (Fafnir) bearing a long runic inscription. The runic alphabet itself was the invention of an earlier age. It is based chiefly on the old Roman alphabet with such modifications of form and symbol as were necessitated by the different sounds in the Teutonic tongues and by the use of such unyielding materials as wood and stone. Straight lines were preferred to curved ones and sloping to horizontal. During the Viking period it was simplified, and runic inscriptions are found from the valley of the Dnieper on the east to Man in the west, and from Iceland on the north to the Piraeus in the south.

[112]

CHAPTER IX SCANDINAVIAN INFLUENCE IN THE ORKNEYS, SHETLANDS, THE WESTERN ISLANDS AND MAN

Of all the countries visited by the Vikings it is undoubtedly the British Isles which bear most definitely the marks of their presence. The history and civilisation of Ireland, the Orkneys and Shetlands, the Western Islands and Man, Scotland and England, were profoundly affected by the Viking movement, and its influence is none the less interesting because it varies greatly from place to place, in both character and intensity. These variations are doubtless due in part to differences of political and social organisation as between Norsemen and Danes, or between men coming from scattered districts of the as yet loosely co-ordinated kingdoms of Denmark and Norway, but their chief cause lies in the wide divergences in the social and political conditions of the lands in which they settled.

The Orkneys and the Shetlands were settled by the Norsemen earlier than any other part of the British Isles and they formed part of the Norse kingdom till 1468. It is not surprising therefore that the great Norse historian Munch describes them as^[113] *ligesaa norskt som Norge selv*, 'as Norse as Norway itself.' The old Norse speech was still spoken there by a few people until the end of the 18th century, and we have a version of the ballad of *King Orfeo* taken down from recital at the close of that century with the Norse refrain still preserved '*Scowan ürla grün—Whar giorten han grün oarlac*,' i.e. probably *Skoven årle grön—Hvor hjorten han går årlig* = 'Early green's the wood—where the hart goes yearly.' Place-nomenclature is almost entirely Norse and the modern dialects are full of Norse words. Several runic inscriptions have been found, the most famous being that at Maeshowe in Hrossey, made by Norse crusaders when they wintered there in 1152-3 and amused themselves by breaking open the how, probably to look for treasure, and scoring their runes on the walls of the grave-chamber. In the system of landholding the 'udallers' are an interesting survival of the old Norse freeholders. 'The Udaller held his land without condition or limitation in any feudal sense,' says Mr Gilbert Goudie, i.e. he held his *udal* on precisely the same free terms that the native Norseman did his *óðal*. From the Shetlands and the Orkneys the Norsemen crossed to the Scottish mainland. Sutherland (i.e. the land south of the Orkneys), Caithness, Ross and Cromarty are full of Norse place-names, and Norse influence may be traced even further south.

[114]

The Hebrides were also largely influenced by the Norsemen. Together with Man they formed a Norse kingdom down to the middle of the 13th century. Many of the islands themselves and their chief physical features bear Norse names, many personal names (e.g. MacAulay, son of Aulay or Olaf) are of Norse origin, and there are many Norse words in the Gaelic both

of the islands, and the mainland. These words have undergone extensive changes and much corruption in a language very different in form and sounds from that of their original source, and their recognition is a difficult problem. There is at present a danger of exaggerating this Norse element, the existence of which was long overlooked. Similarly, affinities have been traced between Scandinavian and Gaelic popular tales and folk-lore, but the evidence is too vague and uncertain to be of much value.

It is however in Man that we get the most interesting traces of the presence of the Norsemen. Here as elsewhere we have place-names and personal names bearing witness to their presence, but we have much else besides. Some 26 rune-inscribed crosses have been preserved to us. The crosses are Celtic in form and to a large extent in ornament also, but we find distinct traces of the Scandinavian animal-ornamentation. The inscriptions are short and for the most part give only the name of the memorial-raiser[115] and the memorised. One bears the rune-writer's own proud boast 'Gaut made this and all in Man.' More interesting than the runes are the sculptured figures. On four of the crosses we have representations of incidents from the Sigurd story—Sigurd slaying Fafnir, Sigurd roasting Fafnir's heart and cooling his fingers in his mouth after trying too soon if the heart was done, Loki slaying the Otter. We also have pictures of Thor's adventure with the serpent of Miðgarðr and of Odin's last fight with Fenrir's Wolf. These sculptured stones are probably among the latest of those found in Man and have their chief parallel in stones found in Sweden (*v. supra*, p. 111). Possibly it was to settlers from Man also that we owe the famous Gosforth cross in Cumberland with its picture of Thor's fishing for the serpent.

In addition to all this we have the Manx legal system as a standing witness to Norse influence. The chief executive and legislative authority in the island (after the Governor) is the Tynwald Court. That court takes its name from the Old Norse *Þing-völlr*[13], the plain where the *Þing*[14] or popular assembly meets, and the House of Keys, which is the oldest division of the court, consisted originally of 24 members, a number perhaps due to Scandinavian influence, being a combination of two groups of 12 lawmen (*v. supra*, p. 103). These men who have the 'keys of the law' in their bosom closely resemble the 'lawmen' or speakers of the Icelandic assembly. All laws to be valid must be promulgated from the Tynwald Hill which corresponds to the *lögberg* or law-hill of the Icelandic *althing*. When the court is held the coroner 'fences' it against all disturbance or disorder, just as in the old Norwegian Gulathing we hear of *vé-bönd* or sanctuary-ropes drawn around the assembly.

[116]

It was possibly from Man that a good number of the Norse settlers in Cumberland, Westmorland and North Lancashire came (*v. infra*, pp. 126-7), and others may have settled in Galloway.

FOOTNOTES:

[13] This word survives in another form in more than one Thingwall among place-names.

[14] The word is familiar to us in the form *-ting* in *hus-ting*, house assembly (originally *hús-bing*), a council held by a king or earl and attended by his immediate followers, in contrast to the ordinary *bing* or general assembly of the people.

CHAPTER X SCANDINAVIAN INFLUENCE IN IRELAND

At the time of the Viking invasion of Ireland the various provincial kingdoms were held in loose confederation under the authority of the *ardrí* or high king, but these kingdoms stood in constantly[117] shifting relations of friendship and hostility towards one another, and were themselves often split into factions under rival chieftains. There was no national army like the English *fyrð*. Rather it consisted of a number of tribes, each commanded by its own chief, and though the chief owed allegiance to the king, the bond was a frail one. The tribe was further divided into *septs* and the army was utterly lacking in any cohesive principle. It is no wonder that for many years the Irish showed themselves quite unable to cope with the attacks of forces so well organised as those of the Norse and Danish Vikings.

In vivid contrast to the chaos in political and military organisation stand the missionary enthusiasm of the Irish church and the high level of education and culture which prevailed among her clergy and *literati*. In the Orkneys and the Shetlands such names as Papa Westray or Papa Stronsay bear witness to the presence of Irish priests or *papae* as the Norsemen called them. Irish anchorites had at one time settled in the Faroes (*v. supra*, p. 6), and when the Norsemen first settled in Iceland (c. 870) they found Irish monks already there. The monastic schools of Ireland were centres of learning and religious instruction for the whole of Western Europe, while Irish missionaries had founded monasteries in Italy, Switzerland, Germany and France.

[118]

Unfortunately religion and culture seem to have been almost entirely without influence on the body politic, and as the Vikings had at least in the early days no respect for the religion or the learning of the Irish nation there was nothing to prevent them from devastating Irish monasteries and carrying off the stores of treasured wealth which they contained. No plunder was more easily won, and it was only when they themselves had fallen under Christian influences and had come to appreciate Irish literary and artistic skill that they showed themselves more kindly disposed towards these homes of learning.

One feature must at once strike the observer who compares the Viking settlements in Ireland with those in England, viz. that Viking influence in Ireland is definitely concentrated in the great coast towns—Dublin, Wexford, Waterford, Cork and Limerick—and the districts immediately around them. Irish place-nomenclature bears very definite witness to this fact.

Ford in Strangford and Carlingford Loughs, Waterford and Wexford is O.N. *fjörðr*, a fjord, -*low* in Arklow and Wicklow is O.N. *ló*, 'low-lying, flat-grassland, lying by the water's edge.' The O.N. *ey*, an island, is found in Lambey, Dalkey, Dursey Head, Ireland's Eye (for Ireland's Ey), Howth is O.N. *höfuð*, 'a head,' Carnsore and Greenore Point contain O.N. *eyrr*, 'a sandy point pushing out[119] into the sea.' Smerwick contains the familiar O.N. *vík* a bay or creek, while the Copeland Islands off Belfast lough are the O.N. *kaupmannaeyjar*, 'the merchants' islands.' All these are found on or off the coast, while the number of Scandinavian names found inland is extremely limited. The most interesting perhaps is Leixlip on the Liffey, a name derived from O.N. *laxahlaup*, 'salmon-leap.' Donegal, Fingall and Gaultiere are Celtic names, but they mark the presence of the northern *Gall* or foreigners, while the *-ster* in Ulster, Leinster and Munster is O.N. *-staðir* (pl. of *-staðr*, place, abode) suffixed to the old Gaelic names of these provinces.

There was free intermarriage between Norse and Irish (*v. supra*, p. 56), but the strength of the clan-system kept the races distinct and there was no such infiltration of the whole population as took place in the English Danelagh. This system prevented any such settlement of Norsemen upon their own farms as took place in England, and the invaders lived almost entirely in the coast towns and the districts in their immediate neighbourhood, busying themselves with trade and shipping.

Though the settlements were limited in their extent, we must not underrate their influence on Irish history generally. They gave the impetus there, as elsewhere, to the growth of town life, and from the period of Viking rule dates the origin of the[120] chief Irish towns. To them also was due the great expansion, if not the birth, of Irish trade. Mention has been made of the wealth of Limerick (*v. supra*, p. 97), drawn chiefly from trade with France and Spain, and the other towns were not behind Limerick. The naval power of Dublin stretched from Waterford to Dundalk, the Irish channel swarmed with Viking fleets, and many of the shipping terms in use in Gaelic are loan-words from the Norse.

It is probably to the trading activities of Vikings from the chiefs ports of Ireland that we owe the sprinkling of names of Norse origin which we find along the Welsh coast from the Dee to the Severn—Great Orm's Head, Anglesey, Ramsey I, Skokholm Island, Flat Holme and Steep Holme, and to them may be due the establishment of Swansea, earlier *Sweinesea*, Haverfordwest and possibly Bideford, as Norse colonies in the Bristol channel. We know in later times of several Norsemen who were living in Cardiff, Bristol, Swansea and Haverfordwest.

Norse influence in Ireland probably reached its climax in the 10th century. The battle of Clontarf offered a serious check and though there was still a succession of Norse kings and earls in Dublin they had to acknowledge the authority of the *ardrí*. The line of Sigtryggr of the Silken Beard came to an end by the middle of the 11th century, and the rulership of Dublin fell into the hands of various Norse families[121] from other Irish settlements and from Man and the Isles. From 1078-94 it was under the rule of the great conqueror Godred Crovan

from Man, and its connexion with that kingdom was only severed finally when Magnus Barefoot came on his great Western expedition in 1103, and brought Man into direct allegiance to the kings of Norway. Celtic influence must have been strong in the Norse families themselves. Several of the kings bear Gaelic names, and it is probably from this period that such familiar names as MacLamont or MacCalmont, MacIver, and MacQuistan date, where the Gaelic patronymic prefix has been added to the Norse names Lagmaðr, Ívarr and Eysteinn. While Norse power in Dublin was on the decline as a political force it is curious to note that the vigorous town-life and the active commerce instituted by the Norse settlers made that city of ever-increasing importance as a centre of Irish life and Irish interests generally, and there can be no question that it was the Norsemen who really made Dublin the capital city of Ireland.

The Norse element remained absolutely distinct, not only in Dublin but also in the other cities in which they had settled, right down to the time of the English invasion in the 12th century. Frequent mention is made of them in the records of the great towns, and they often both claimed and received privileges quite different from those accorded to the[122] native Irish or to the English settlers. They were known to the latter as 'Ostmen' or 'Easterlings,' a term which in this connexion seems to have ousted the earlier *Norvagienses* or *les Norreys*, *les Norwicheis*. The term 'Ostman' doubtless represents O.N. *Austmaðr*, a man dwelling to the east. Exactly how or where it first came to be applied to Norsemen it is difficult to say. The word has left its mark in Oxmanstown, earlier Ostmanstown, the district of the city of Dublin assigned to the Ostmen by the English invaders.

Learning and religion in Ireland suffered grievously from Norse attack but not so sorely as in England. There was never a time when so dark a picture could have been drawn of Irish learning as Alfred gives of the state of English learning when he translated the *Pastoral Care*, and when once the Vikings began to form settlements they were themselves strongly affected by the wealth of literary and artistic skill with which they found themselves brought into contact. The question of Irish influence on Norse mythology and literature is a much vexed one. At present we are suffering from a reaction against exaggerated claims made on its behalf some thirty years ago, but while refusing to accept the view that Norse legends, divine and heroic alike, are based on a wholesale refashioning and recreating of stories from Celtic saga-lore, it would be idle to deny that[123] the contact between the two nations must have been fertile of result and that Norse literature in form, style and subject-matter alike, bears many marks of Gaelic influence.

CHAPTER XI

SCANDINAVIAN INFLUENCE IN ENGLAND

Of the districts occupied by Scandinavian settlers in England the ones which show their presence most strongly are Cumberland, Westmorland, North Lancashire and Yorkshire in the old kingdom of Northumbria and the district of the Five Boroughs in the midlands. East

Anglia was not so deeply affected by the Danish occupation.

Before dealing with one of the chief sources of our knowledge of the presence of Norse and Danish settlers in various parts of England, viz. the evidence derived from place-nomenclature, a few words must be said as to the chief Scandinavian elements which can be recognised in English place-names.

Of elements other than personal names the commonest are as follows, several of them being used as independent words to this day in English dialects which have been affected by Scandinavian influence:—

-BECK. O.N. *bekkr*, brook, small stream of water.

[124]

-BIGGIN(G). O.N. *byggjng*, building.

-BY. O.N. *bør*, Dan. Swed. *by*, town or village. This word indicates a Danish rather than a Norse settlement.

-CAR(R), -ker. O.N. *kjarr*, *kjörr*, brushwood, especially on swampy ground.

-DALE. O.N. *dalr*, valley. Etymologically this word might be of native English origin but its distribution points to Norse influence.

-FELL. O.N. *fjall*, mountain.

-FORCE. O.N. *fors*, waterfall.

-FORTH. O.N. *fjorðr*, fjord. English -ford and Scandinavian -forth often interchange in the old documents.

-GARTH. O.N. *garðr*, enclosure, the Scandinavian equivalent of English 'yard.'

-GILL. O.N. *gil*, deep narrow glen with a stream at the bottom.

-HOLM. O.N. *holmr*, small island especially in a bay, creek, or river. In England its meaning was further developed and it often means 'low-lying level ground on the borders of a river or stream.' Now often concealed in the suffix -ham.

-KELD. O.N. *kelda*, well, spring.

-LUND, -lound. O.N. *lundr*, grove. Now often corrupted to -land in English place-names.

-MIRE. O.N. *myrr*, moor, bog, swamp.

-RAISE. O.N. *hreysi*, cairn.

[125]

-SCALE. O.N. *skali*, house. This word is Norse rather than Danish.

-SCAR, -skear, -skerry. O.N. *sker*, isolated rock in the sea.

-SCOUT. O.N. *skúti*, cave formed by jutting rocks.

-SCOUGH, -scow. O.N. *skógr*, wood.

-SLACK. O.N. *slakki*, slope on a mountain edge. Often used in English place-names of a hollow or boggy place[15].

-TARN. O.N. *tjörn*, small lake.

-THORP(E). O.N. *þorp*, hamlet, village. This word is also found in O.E. and in some place-names is undoubtedly of native origin, but its general distribution points fairly conclusively to Norse influence.

-THWAITE. O.N. *þveit*, parcel of land, paddock.

-TOFT. O.N. *toft*, piece of ground, messuage, homestead.

-WITH. O.N. *viðr*, a wood.

-WATH. O.N. *vað*, a ford.

Place-names with the prefix *Norman-* mark the settlement not of Normans but of Norsemen (or Northmen as the English called them), as in Normanton and Normanby, while the settlement of Danes is marked by the prefix *Dena-* or *Den-* as in Denaby and Denby. This latter prefix however has other sources as well.

[126]

Scandinavian personal names are very common in place-names but their presence can as a rule only be detected with any degree of certainty by reference to the forms found in early documents. Among the more easily recognised are *Grímr*, as in Grimsargh (Lancs.) and Grimsby (Lincs.), *Gunnarr*, as in Gunnerside (Yorks.), *Ketill*, as in Kettlewell (Yorks.), *Klakkr*, as in Claxton (Norf.), *Ormr*, as in Ormskirk (Lancs.). Others, to be found by reference to earlier forms, are *Fráni*, as in Franesfeld (=Farnsfield, Notts.), *Gamall*, as in Gamelestune (=Gamston, Notts.), *Gunnúlfr*, as in Gunnulveston (=Gonalston, Notts.), *Knútr*, as in Cnutestone (=Knuston, Northants.), *Leifr*, as in Levesbi (=Laceby, Lincs.), *Sumarliði*, as in Sumarlidebi (=Somerby, Lincs.), *Skúli*, as in Sculetuna (=Scoulton, Norf.), *Tóli*, as in Toleslund (=Toseland, Hunts.), *Víkingr*, as in Wichingestone (=Wigston, Leic.), *Úlfr*, as in Ulvesbi (=Ulceby, Lincs.).

Examining the distribution of Scandinavian place-names determined by the above tests and others which can be applied with great accuracy, if we study not the modern but the old forms of the place-names, we find that the place-nomenclature of Cumberland and Westmorland is almost entirely either Scandinavian or Celtic. Indeed it would seem that the Anglian settlement had hardly affected these districts at all, and it was reserved for the[127] Scandinavian settlers to Teutonise them. The same is true of Furness and Lancashire, north of the Ribble, whose old names Stercaland and Agmundernesse are of Norse origin, but south of that river there is a great diminution of Norse place-names except along the coast and a little way inland, where we have several *-bys* and *-dales*. In Cheshire the evidence of Scandinavian settlement is confined almost entirely to the Wirral, but there the large number of *-bys* and place-names like Thingwall (*v. supra*, p. 115, note 1) point to a strong Viking colony, and the distribution of place-names in South Lancashire and Cheshire bears witness to active intercourse between the settlers in Ireland and England.

On the other side of the Pennine chain, though Northumberland was several times ravaged by the Norsemen and was probably well populated at least in the fertile river-valleys, there is practically no evidence of their presence to be found in place-names. There are several Biggins, Carrs, and Holms, a few Tofts and Dales, but these are common dialect words and usually found in uncompounded forms. They are practically never found in names of towns or villages, and may well have been introduced from districts further south. In the extreme west and south-west of the county there are 'fells' and 'dales' but these are on the borders of Cumberland, Westmorland and Durham. The small streams are[128] 'burns' and not 'becks,' the Wansbeck being a corruption of an earlier *Wanespike*.

When we cross into co. Durham the tributaries of the Wear vary between 'burn' and 'beck,' but by the time we reach the Tees these have all become becks. Beechburn Beck, a tributary of the Wear, shows how a Scandinavian term could be attached to an English name, when its own meaning was neglected or forgotten. Other Scandinavian names are common, but as in Northumberland they belong to the dialect generally and are seldom found in names of towns or villages. Viking settlers must have been few in numbers and widely scattered throughout these two counties. One great exception must be named among the towns, viz. Durham itself. The city was named *Dún-holmr*, 'the hill-island,' by the Vikings, and its present name is only the Norman corruption of that form.

South of the Tees we find ourselves in a district whose place-names are to a very large extent Scandinavian, and Norse settlements are thickly and evenly distributed from the North Sea to the Pennine chain.

Passing from Northumbria to the Danelagh, Lincolnshire is perhaps more purely Scandinavian in its place-names than any other English county. In Derbyshire Viking influence is not so strong but the county was probably very thinly inhabited at least[129] in the north and west and did not offer attractive settling ground. Derby itself was rechristened by the Northmen, its earlier name being 'Norðweorðig.' The rich fields and pastures of

Leicestershire attracted a great many settlers and Nottinghamshire is also strongly Scandinavian. Rutland and Northamptonshire are strongly Danish except that there is some shading off towards the S.W. corner of the latter county. In the country bordering the Danelagh on the south and west, Staffordshire has a few Scandinavian place-names on its Derbyshire and Leicestershire borders, while Warwickshire has several on its Leicestershire and Northamptonshire borders.

In East Anglia Danish settlements must have been numerous in the north and east especially towards the coast, but their presence is less strongly marked in the S.W. portion of the county. In Suffolk they are confined still more definitely to the coast-districts and the Danes do not seem to have settled in the south of the county at all. Three Kirbys near the Essex coast mark settlements in that county. Of the other border-counties Huntingdonshire, Cambridgeshire and Bedfordshire show only the slightest traces of Scandinavian influence in their place-nomenclature, though we know from other evidence that there must have been many Danish settlers in these counties.

Closely allied to the evidence of place-names is^[130] that of dialect. A very large number of words definitely of Scandinavian origin are found in the dialects of N.E. and N.W. England, in the N. Midlands and East Anglia, but they do not furnish so sensitive a test as do place-names for the extent of the Scandinavian settlements and they need not be discussed here.

More interesting as evidence of the deep influence of the Viking settlers on our language is the large number of Scandinavian loan-words which have become part of our standard speech, many of them being words essential to our every-day talk. To Scandinavian influence we owe the pronouns *they*, *them* and *their*, the adjectives *same* and *both*, the *fro* in *to* and *fro* and possibly the auxiliary *are* and the preposition *till*. These last are found in the Northumbrian dialect of Old English but their widespread use is probably due to Scandinavian influence. In addition to these we may note the following:

Verbs: *bait*, *bask*, *batten*, *call*, *cast*, *dawn*, *droop*, *drown*, *gain*, *gabble*, *ransack*, *scare*, *scour*, *scrape*, *skim*, *skip*, *squeal*, *stint*, *take*,

Nouns: *anger*, *billow*, *boon*, *dusk*, *fellow*, *gait*, *grime*, *haven*, *husband*, *husk*, *husting*, *scull*, *scurf*, *skill*, *skin*, *skirt*, *sky*, *window*,

Adjectives: *awkward*, *ill*, *odd*, *rotten*, *scant*, *sly*, *ugly*, *weak*,^[131] and a good many words in which Scandinavian forms have replaced the cognate English ones, e.g. *aloft*, *athwart*, *awe*, *birth*, *egg*, *get*, *gift*, *give*, *guest*, *raid*, *sister*, *swain*, *Thursday*.

These words are for the most part of the very stuff and substance of our language, giving vivid expression to clear-cut ideas, and though numerically they are outnumbered by the loan-words from French, they are in themselves more essential to our speech than the rich vocabulary derived from that language.

For the extent and character of the Viking settlements in England we have however a far more delicate and accurate index than that to be found in the evidence of place-names and dialects. When we study the pages of Domesday, the great record of English social organisation in the 11th century, we find that in the counties which came under Viking influence there are many details of land-division, tenure, assessment and social organisation generally wherein those counties differ from the rest of England, and some of these differences can still be traced.

The 'ridings' of Yorkshire and the Lindsey division of Lincolnshire were originally 'thrithings' (O.N. *priþjungr*, a third part), the initial *th* being later absorbed by the final consonant of the preceding 'East,' 'West,' 'North' and 'South' (in Lincs.).

The chief tests of Scandinavian influence, drawn[132] from Domesday and allied sources, are however as follows:

(1) The use of the Danish 'wapentake' as the chief division of the county in contrast to the English 'hundred.' This is found in Lincolnshire, Derbyshire (with one exception on its southern border), Nottinghamshire, Leicestershire, Rutland, and one district of Northamptonshire, now included in Rutland. We have wapentakes in Yorkshire, except in certain districts along the sea-coast, while in Lancashire the term was applied to the court of the hundred or shire long after the Conquest. There is some evidence also for the belief that the use of the hundred (or wapentake) as an administrative unit is in itself due to Scandinavian influence. The proportion of names of hundreds (or wapentakes) which are definitely of Danish origin is very high and, unless we assume wholesale renaming, this points to their having been first named at a period subsequent to the Danish conquest.

(2) The assessment by carucates in multiples and submultiples of 12 is characteristic of the Danelagh, as opposed to that by hides, arranged on a decimal system in the strictly English districts. This is found in Derbyshire, Nottinghamshire, Lincolnshire, Leicestershire and Rutland, with the exception of the above mentioned district. There are traces of a duodecimal assessment in the two N.E. hundreds of[133] Northamptonshire, while in Lancashire a hidal assessment has been superimposed upon an original carucal one. Carucal assessment is found also in Yorkshire, Norfolk and Suffolk.

(3) In Lincolnshire, Nottinghamshire, Derbyshire and Yorkshire we have traces of the use of the Danish 'long' hundred (= 120), e.g. the fine for breaking the king's peace is £8, i.e. 120 ores[16] of 16 pence.

Using the various tests we find that the Scandinavian kingdom of Northumbria was considerably smaller than the earlier realm of that name, Northumberland and Durham being but sparsely settled, while South Lancashire and Cheshire were occupied chiefly along the coast. The kingdom would seem to fall into two isolated halves, Cumberland and Westmorland and North Lancashire in the north-west and Yorkshire in the south-east. The

district of the Five Boroughs covered Derbyshire, Nottinghamshire, Lincolnshire (Lincoln and Stamford), Leicestershire, and probably the whole of Rutland (Stamford). The case of Northamptonshire is difficult. The carucal assessment fails except in the extreme N.E. of the county, but Danish place-nomenclature is strongly evident, though it shades off somewhat towards the S.W. It resembles Danish East Anglia rather than the district of the Five Boroughs and it is possible that the boundary of Guthrum's East Anglian kingdom, which is only carried as far as Stony Stratford in the peace of Alfred and Guthrum, really ran along Watling Street for a few miles, giving two-thirds of that county to the East Anglian realm.

[134]

Northumbria was governed by a succession of kings. The Five Boroughs formed a loose confederation, and there can be no question that the districts which 'obeyed' (*v. supra*, p. 31) the boroughs of Derby, Leicester, Nottingham, Lincoln (and Stamford) and Northampton form the modern counties named from these towns. It is also to Danish influence direct or indirect that we owe the similar organisation of the counties of Huntingdonshire, Cambridgeshire, Bedfordshire and Hertfordshire in the old East Anglian kingdom. Each of these counties had a *jarl* or earl, whose headquarters were at the 'borough.' He summoned the *here*, whether for political or military purposes, and when these counties passed once more under English rule he fulfilled the functions of the older *ealdorman*.

In East Anglia, apart from place-names (*v. supra*, p. 129) and carucal assessment in Norfolk and Suffolk, we are left with the boundaries of Guthrum's kingdom and with various miscellaneous evidence for estimating the extent of Scandinavian influence. There is a curious 'hundredus Dacorum' (*cf. supra*, p. 10) in [135] Hertfordshire, while the *Historia Eliensis* and other documents tend to show the presence of a strong Danish element in the population and social organisation of the districts around Cambridge. The kingship of East Anglia came to an end early in the 10th century, and it is probable that its organisation was then changed to one resembling that of the Five Boroughs, viz. a number of districts grouped around central 'boroughs,' which afterwards became counties, except in the older divisions of Norfolk and Suffolk.

A careful study of Domesday and other authorities reveals many other features of interest in our social system which were due to Viking influence. Certain types of manorial structure are specially common in the Danelagh. Manor and vill are by no means identical, indeed several manors are included under one vill. Very frequent is the type which consists in a central manor with sokeland appurtenant. In the Danelagh there was a large number of small freeholders and the free peasant class was much more numerous than in Anglo-Saxon England. These districts stand in clear contrast to the strongly manorialised southern counties and they were not feudalised to any appreciable extent before the Norman conquest. When that system was imposed we often find single knight's fees having to be taken over by entire communities of sokemen. The 'holds' of Northumbria, who rank next after the earls, [136] and the 'drengs' of Cumberland, Westmorland, Lancashire,

Northumberland and Durham, are also of Scandinavian origin. The 'drenc' was 'a free servant of the king endowed with lands' and the name still survives in the Yorkshire place-name Dringhouses.

The legal instinct was strong in the Scandinavian mind and English law bears deep marks of its influence. The very word 'law' itself is of Scandinavian origin and has replaced the English 'doom.' The chief judicial authority in Lincoln, Stamford, Cambridge, Chester and York was in the hands of twelve *lagmen* or *judices*. These 'lawmen' (*v. supra*, p. 103) though they had judicial authority were not chosen by the king or by popular election. Their position was hereditary. Of special interest are the '12 senior thanes' of Aethelred's laws for the Five Boroughs enacted at Wantage in 997. They have to come forward in the court of every wapentake and to swear that they will not accuse wrongly any innocent man or conceal any guilty one. The exact force of this enactment has been a matter of dispute—whether the thanes simply bore witness to the personal status of the accused, thus enabling the court to determine the ordeal through which he should be put, or whether we have an anticipation of the system of presentment by jury. Whatever may be the exact truth there can be little doubt, says Dr Vinogradoff, that[137] such a custom prepared the way for the indictment jury of the 12th century. The same author attributes to Danish influence a new conception of crime. It is no longer merely a breach of the peace or the result of a feud, to be settled by monetary compensation, it is a breach of that conception of honour which binds together military societies. The criminal is now branded as *nithing*, a man unworthy of comradeship with his fellow-warriors.

Unfortunately it is only within the last few years that the question of Danish influence on our social, political and legal systems has been treated at all seriously and much work still remains to be done, but we can already see that the Danes affected English life far more deeply than a superficial glance might suggest. Doubtless the Danish invasions struck a heavy blow at learning and literature, a blow from the effects of which not even the heroic activities of an Alfred could save them, but there can be no question that in the development of town life, in the promotion of trade, in the improvement of organisation and administration, in the modification of legal procedure the invaders conferred great benefits on the country as a whole.

FOOTNOTES:

[15] In Scotland it is used of a hollow pass in a ridge.

[16] The *ore* as a unit of weight for silver is of Scandinavian origin. In some districts it was of the value of 16 pence, in others of 20 pence, and eight *ores* went to the *mark*.

[138]

CHAPTER XII

SCANDINAVIAN INFLUENCE IN THE EMPIRE AND ICELAND

Considering the long and devastating campaign of the Vikings within the Frankish empire and more especially within its western portion, it is surprising that they only formed permanent settlements in one small area, leaving practically no marks of their presence elsewhere. Great portions of the Low Countries were in almost continuous occupation by them during the 9th century, but the opportunity was lost, and beyond an important share in the development of the trade of Duurstede, the Vikings hardly left a sign of their influence behind them.

The case of Normandy is different. Here we have a definite district assigned to the invaders, just as the Danelagh was given to them in England, and the whole of that territory is deeply impregnated with their influence. Many of the Norman towns in *-ville* contain as the first element in their name a Norse personal name, e.g. Catteville, Cauverville, Colleville, Fouqueville, Hacqueville containing the names *Káte*, *Kálfr*, *Kolr*, *Fólki*, *Hákon*, while the suffixes *-bec*, *-beuf*, *-dale*, *-ey*, *-gard*, *-londe*, *-torp*, *-tot*, *-tuit*,^[139] *-vic* as in Bolbec, Elbeuf, Saussedalle, Jersey, Epegard, Mandelonde, Torgistorp, Abbetot, Bracquetuit, Barvic go back to O.N. *bekkr*, *búð* (booth), *dalr*, *ey* (island), *garðr*, *lundr*, *þorp*, *topt*, *þveit*, *vík* (*v. supra*, pp. 124-5). The dialect of Normandy to this day contains a good number of Scandinavian words, and others have been introduced into the standard language. Some of these have also found their way into English through our Norman conquerors, e.g. *abet*, *baggage*, *elope*, *equip*, *jolly*, *rubbish*, *scoop*, *strife* just as the *Bulbeck* in Swaffham Bulbeck (Cambs.) and Bulbeck Common above Blanchland in Northumberland is from the great Norman barony of Bulbeck, so named after Bolbec in Normandy, of which they once formed part. Norman law and customs also show many traces of Scandinavian influence and so does Norman folklore.

The Normans still looked to Denmark as their home-land down to the end of the 10th century, and at least twice during the reign of Harold Bluetooth their Dukes received help from that country. The nobles soon ceased to speak their old northern language, but it is probable that it remained current on the lips of the people for some considerable time longer.

The Vikings always showed themselves keenly sensitive to the influence of a civilisation higher or more developed than their own, and this is nowhere more apparent than in Normandy. Heathenism^[140] found a champion as late as 943 when, on the death of William Longsword, a rising of heathen Normans was crushed with the aid of the Frankish king, but for the most part the Normans soon showed themselves devout sons of the Church and were destined in the 11th century to be numbered among the most ardent supporters of the Crusades. With the adoption of Christianity they learned to respect and honour those homes

of learning which they had once devastated for their wealth of hoarded treasure, and the famous school at Bec, whence came Lanfranc and Anselm, was only one among many which they richly endowed and supported.

Their religious and artistic feeling found expression in that development of Romanesque architecture which we know as Norman and which has given so many famous buildings not only to Normandy but to England, to Sicily and to Southern Italy generally. In literature the Norman-French *trouvères* did much towards popularising the romances of war and adventure which play so important a part in medieval literature, and when they settled in England it was largely due to Anglo-Norman poets that 'the matter of Britain' became one of the great subjects of romance for all time.

In its social organisation Normandy seems speedily to have been feudalised. Rollo divided the land among a comparatively small number of large[141] landholders and the system of land tenure was quite different from that in the English Danelagh with its large number of small freeholders. On the other hand it was probably due to Norse traditions of personal freedom that serfdom disappeared earlier in Normandy than in any other of the French provinces.

Trade and commerce were fostered here as everywhere by the Vikings. It was the Normans who first taught the French to become a power at sea, many French naval terms are of Norman origin and from the Norman province have come some of France's greatest sea-captains.

The Vikings like the Franks before them threw off their old speech and submitted to the all-embracing power of Latin civilisation, and the result was a race endowed with vigorous personality, untiring activity, and the instinct for ruling men. The Normans may have become largely French but they lost none of their old enterprise and spirit of adventure. In the 11th century they conquered England and founded great kingdoms for themselves in Sicily and South Italy. No Viking stock was more vigorous than that which resulted from the grafting of Gallo-Latin culture on the ruder civilisation of the Teutonic north.

Their influence on France as a whole is not nearly as great as the influence of their kinsmen in England, probably because English government was centralised[142] (under Norman rule) much sooner than French government, and their influence was thus able to make itself felt outside the actual districts in which they settled. The settlement of Normandy helped however towards the consolidation of power in the hands of Charles the Bald and his successors, much as the settlement of the Danelagh helped in establishing the final supremacy of Wessex.

It remains to speak of one great home of Viking civilisation to which more than one reference has been made in previous chapters, viz. Iceland. The story of its settlement is a very simple one. It commenced about 870, when many great Norwegian noblemen sought there for

themselves and their followers a freer life than they could obtain under the growing power of Harold Fairhair. It was greatly strengthened by settlers both from Norway and from Ireland and the Western Islands when that power was firmly established by the battle of Hafrsfjord, and by the year 930 the settlement was practically complete. Iceland was more purely Scandinavian than any other settlement made during the Viking age. Here we have not the case of one civilisation grafted on another and earlier one as in England, Ireland or the Frankish empire, but the transference of the best and finest elements in a nation to new and virgin soil where, for good or ill, they were free to develop their civilisation on almost[143] entirely independent lines. Settlers from the Western Islands and from Ireland may have brought Celtic elements, and Christianity was not without influence, when it was introduced from Norway at the close of the 10th century, but on the whole we see in Iceland just what Viking civilisation was capable of when left to itself.

At first the settlers lived in almost complete isolation, political and religious, from one another, but they soon found that some form of organisation was necessary and groups of settlers began by choosing from among their number a *goði*, or chieftain, half-priest, half-leader, who was the speaker at their moot and their representative in negotiation with neighbouring groups. Then, continued disputes and the lack of a common law led to the establishment of a central moot or *alþing*, with a speaker to speak one single law for all. But the Norsemen were much better at making constitutions and enacting laws than they were at observing them when instituted, and the condition of Iceland has been vividly if roughly summarised as one of 'all law and no government.' The local *þings* or the national *alþing* might enact perfect laws, but there was no compelling force, except public opinion, to make them be obeyed. Even the introduction of Christianity made no difference: the Icelanders quarrelled as bitterly over questions of ecclesiastical[144] as of civil law and the authorities of the medieval Church were scandalised by their anarchic love of freedom. In the words of Professor Ker 'the settlers made a commonwealth of their own, which was in contradiction to all the prejudices of the middle ages and of all ancient and modern political philosophy; a commonwealth which was not a state, which had no government, no sovereignty.' 'It was anarchy without a police-constable.' The result was that the rich men grew richer, the poor became poorer, the smaller gentry died out and the large estates fell into fewer and fewer hands. The great men quarrelled among themselves, intrigued against one another and played into the hands of the Norwegian kings who were only waiting their opportunity. It came in the days of Hákon the Old. 'Land and thanes' were sworn into subjection to that king at the Althing in 1262, and in 1271 the old Icelandic common law was superseded by a new Norse code.

The failure of the Icelandic commonwealth is amply compensated for by the rich intellectual development of Icelandic literature, which owed many of its most characteristic features to the fact that it was written in a land almost completely isolated and detached from the main currents of Western medieval thought and the general trend of European history, but in itself that failure is full of deepest import for a right understanding of the part played[145] by Viking

civilisation in Europe. Powerful and highly developed as that civilisation was in many ways, it only reached its highest and best expression when brought into fruitful contact with other and older civilisations. There it found the corrective for certain inherent weaknesses, more especially for certain tendencies of too strongly individualistic character leading to political and intellectual anarchy, while at the same time by its own energy and vigour it quickened the life of the older civilisations where they were tending to become effete or outworn. The Germanic peoples had done much for the development of European civilisation in the time of the wanderings of the nations, but by the end of the 8th century they had lost much of their pristine vigour through contact with the richer and more luxurious civilisation of the Roman world. It was reserved for the North Germanic peoples, or the Northmen as we can more fitly describe them, in the 9th and 10th centuries to give a yet more powerful stimulus to European life, if not to European thought, a stimulus which perhaps found its highest expression in the great creations of the Norman race in the world of politics, the world of commerce, the world of architecture and the world of letters.

[146]

BIBLIOGRAPHY

[The appended bibliography does not attempt to deal with primary authorities, with the large mass of valuable periodical literature which has been published within the last thirty years, or with books only incidentally concerned with the movement. It is much to be regretted that so few of the important Scandinavian books on the subject have been translated into English.]

SIXTY VOLUMES NOW READY
HISTORY AND ARCHAEOLOGY

Ancient Assyria. By Rev. C. H. W. Johns, Litt.D.

Ancient Babylonia. By Rev. C. H. W. Johns, Litt.D.

A History of Civilization in Palestine. By Prof. R. A. S. Macalister, M.A., F.S.A.

China and the Manchus. By Prof. H. A. Giles, LL.D.

The Civilization of Ancient Mexico. By Lewis Spence.

The Vikings. By Prof. Allen Mawer, M.A.

New Zealand. By the Hon. Sir Robert Stout, K.C.M.G., LL.D., and J. Logan Stout, LL.B. (N.Z.).

The Ground Plan of the English Parish Church. By A. Hamilton Thompson, M.A., F.S.A.

The Historical Growth of the English Parish Church. By A. Hamilton Thompson, M.A., F.S.A.

Brasses. By J. S. M. Ward, B.A., F.R.Hist.S.

Ancient Stained and Painted Glass. By F. S. Eden.

LITERARY HISTORY

The Early Religious Poetry of the Hebrews. By the Rev. E. G. King, D.D.

The Early Religious Poetry of Persia. By the Rev. Prof. J. Hope Moulton, D.D., D.Theol. (Berlin).

The History of the English Bible. By the Rev. John Brown, D.D.

English Dialects from the Eighth Century to the Present Day. By W. W. Skeat, Litt.D., D.C.L., F.B.A.

King Arthur in History and Legend. By Prof. W. Lewis Jones, M.A.

The Icelandic Sagas. By W. A. Craigie, LL.D.

Greek Tragedy. By J. T. Sheppard, M.A.

The Ballad in Literature. By T. F. Henderson.

Goethe and the Twentieth Century. By Prof. J. G. Robertson, M.A., Ph.D.

The Troubadours. By the Rev. H. J. Chaytor, M.A.

PHILOSOPHY AND RELIGION

The Idea of God in Early Religions. By Dr F. B. Jevons.

Comparative Religion. By Dr F. B. Jevons.

The Moral Life and Moral Worth. By Prof. Sorley, Litt.D.

The English Puritans. By the Rev. John Brown, D.D.

An Historical Account of the Rise and Development of Presbyterianism in Scotland. By the Rt Hon. the Lord Balfour of Burleigh, K.T., G.C.M.G.

Methodism. By Rev. H. B. Workman, D.Lit.

EDUCATION

Life in the Medieval University. By R. S. Rait, M.A.

ECONOMICS

Cash and Credit. By D. A. Barker, I.C.S.

LAW

The Administration of Justice in Criminal Matters (in England and Wales). By G. Glover Alexander, M.A., LL.M.

BIOLOGY

The Coming of Evolution. By Prof. J. W. Judd, C.B., F.R.S.

Heredity in the Light of Recent Research. By L. Doncaster, M.A.

Primitive Animals. By Geoffrey Smith, M.A.

The Individual in the Animal Kingdom. By J. S. Huxley, B.A.

Life in the Sea. By James Johnstone, B.Sc.

The Migration of Birds. By T. A. Coward.

Spiders. By C. Warburton, M.A.

House Flies. By C. G. Hewitt, D.Sc.

Earthworms and their Allies. By F. E. Beddard, F.R.S.

ANTHROPOLOGY

The Wanderings of Peoples. By Dr A. C. Haddon, F.R.S.

Prehistoric Man. By Dr W. L. H. Duckworth.

GEOLOGY

Rocks and their Origins. By Prof. Grenville A. J. Cole.

The Work of Rain and Rivers. By T. G. Bonney, Sc.D.

The Natural History of Coal. By Dr E. A. Newell Arber.

The Natural History of Clay. By Alfred B. Searle.

The Origin of Earthquakes. By C. Davison, Sc.D., F.G.S.

BOTANY

Plant-Animals: a Study in Symbiosis. By Prof. F. W. Keeble.

Plant-Life on Land. By Prof. F. O. Bower, Sc.D., F.R.S.

Links with the Past in the Plant-World. By Prof. A. C. Seward.

PHYSICS

The Earth. By Prof. J. H. Poynting, F.R.S.

The Atmosphere. By A. J. Berry, M.A.

The Physical Basis of Music. By A. Wood, M.A.

PSYCHOLOGY

An Introduction to Experimental Psychology. By Dr C. S. Myers.

The Psychology of Insanity. By Bernard Hart, M.D.

INDUSTRIAL AND MECHANICAL SCIENCE

The Modern Locomotive. By C. Edgar Allen, A.M.I.Mech.E.

The Modern Warship. By E. L. Attwood.

Aerial Locomotion. By E. H. Harper, M.A., and Allan E. Ferguson, B.Sc.

Electricity in Locomotion. By A. G. Whyte, B.Sc.

*** END OF THE PROJECT GUTENBERG EBOOK THE VIKINGS ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg™ License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg™ electronic works

1.A. By reading or using any part of this Project Gutenberg™ electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg™ electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg™ electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg™ electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg™ electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg™ electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg™ electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg™ mission of promoting free access to electronic works by freely sharing Project Gutenberg™ works in compliance with the terms of this agreement for keeping the Project Gutenberg™ name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg™ License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating

derivative works based on this work or any other Project Gutenberg™ work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg™ License must appear prominently whenever any copy of a Project Gutenberg™ work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg™ electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg™ trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg™ electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg™ License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg™ License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg™.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg™ License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg™ work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg™ website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg™ License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg™ works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg™ electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg™ works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg™ trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you ‘AS-IS’, WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg™ work, (b) alteration, modification, or additions or deletions to any Project Gutenberg™ work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg™

Project Gutenberg™ is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg™'s goals and ensuring that the Project Gutenberg™ collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg™ and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg™ electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg™ concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg™ eBooks with only a loose network of volunteer support.

Project Gutenberg™ eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org. This website includes information about Project Gutenberg™, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
